

OP Portal™
powered by IntelliChart

Easily engage with patients and parents

The OP Portal is a secure, HIPAA-compliant solution that facilitates parent and patient engagement with your practice. Powered by IntelliChart, the industry leader in patient engagement technology, the OP Patient Portal enables your practice to:

- **Improve communications and documentation** - strengthen your relationship with parents and patients with an easy-to-use messaging system that allows secure messages to be sent between users and practice staff (all messages are transcribed into the patient record). Plus, share handouts, school forms, excuse notes, asthma plans, and more.
- **Increase patient/parent satisfaction** - users can view child's full health record, including demographics, lab results, upcoming appointments, and medication and immunization lists from an iPhone/Android smartphone or a computer.
- **Save your practice time and money** - provide parents with the option to schedule appointments via the portal. Also, encourage portal users to request refills and referrals online vs. over the phone.
- **Provide a greater focus on quality care** - easily access and share patient information electronically so your practice can focus on what really matters – providing exceptional pediatric care.

By giving your parents and patients easy access to the OP Patient Portal, you not only make their lives easier, but yours as well.
