

# Center for Research on Innovative Simulation Software

Conducted Research on  
Manufacturing and Environment

## Simulation for Ship and Vehicle

【Kato. Lab.】

Direct numerical simulation of turbulent boundary layers around a ship and comparison of computed ship-resistance with measurement (left), and computations of ship-generated-waves (right)  
<collaborative research with Shipbuilding Research Centre of Japan (SRCJ)>

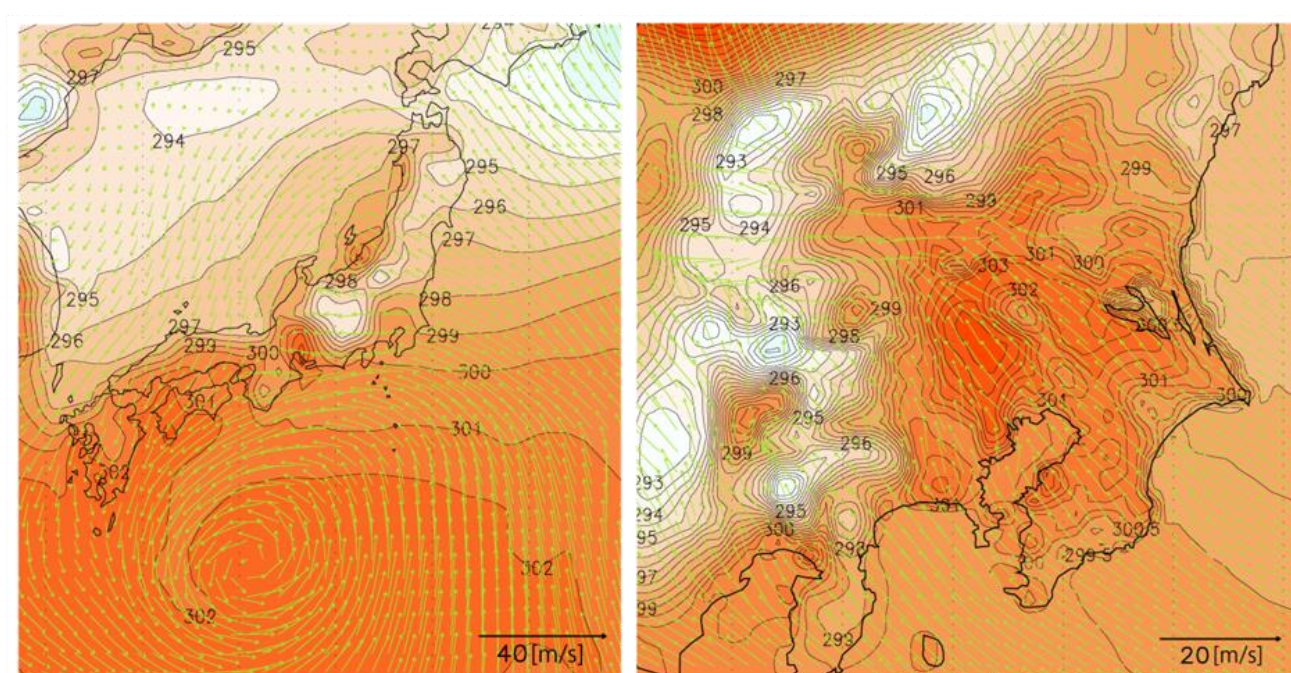

Coupled simulations of external-fluid flow, panel vibration, and interior acoustics to predict cabin noise  
<collaborative research with Toyohashi University of Technology and SUZUKI MOTOR CORPORATION>

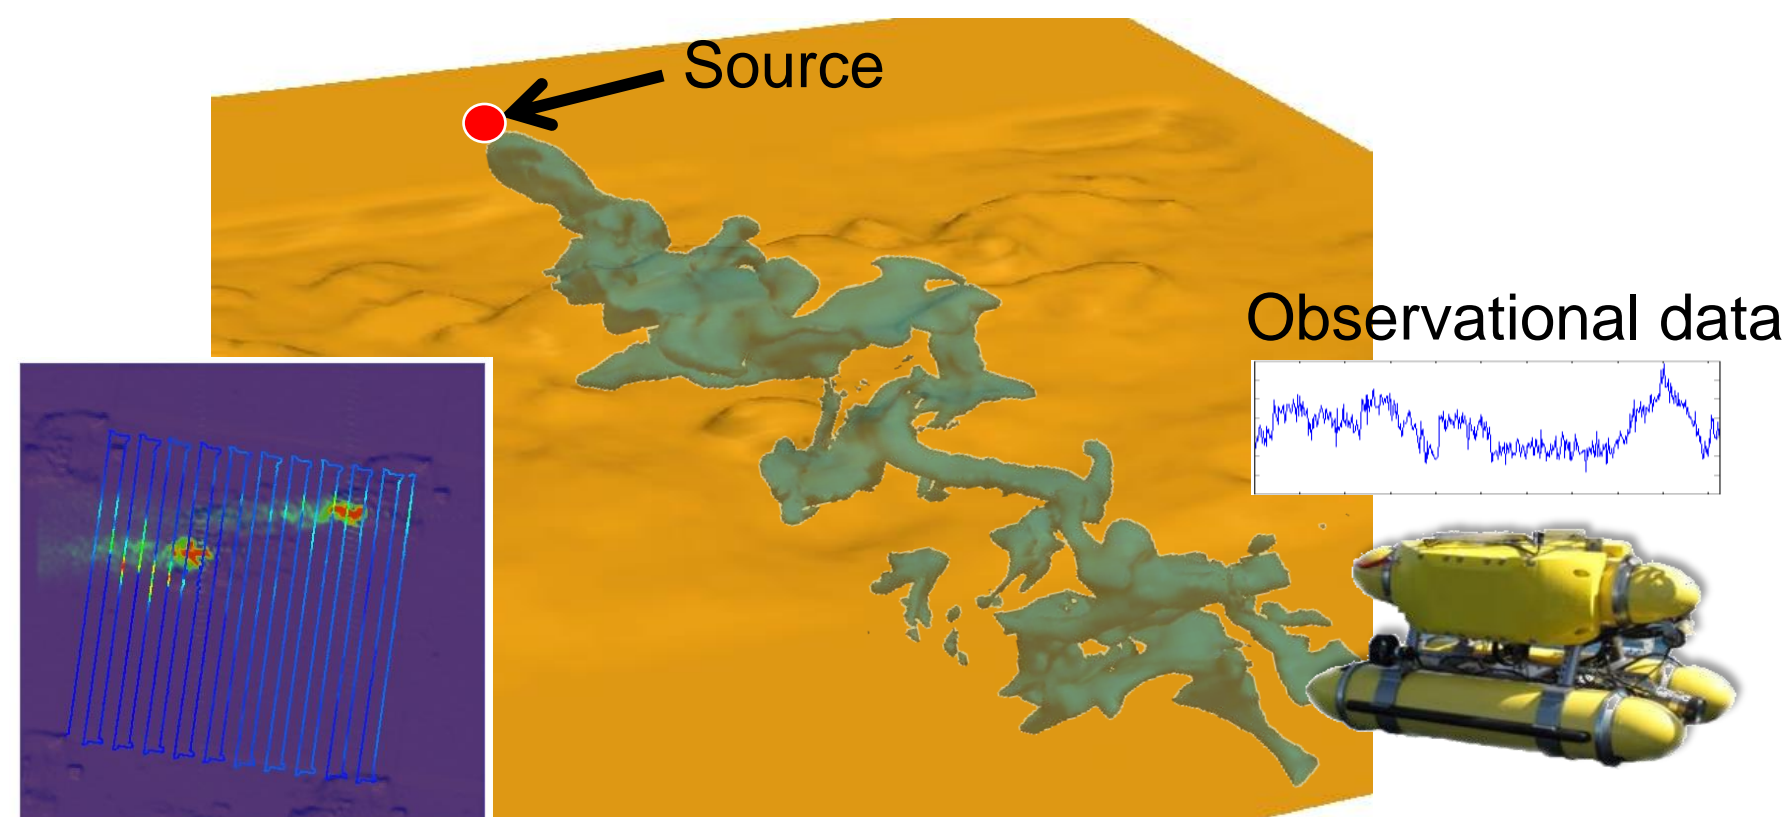

## Environmental Simulation

【Ooka. Lab.】

【Hasegawa Lab.】

Numerical estimation of local climate using WRF  
left: Typhoon No.10, right: Heat island effect

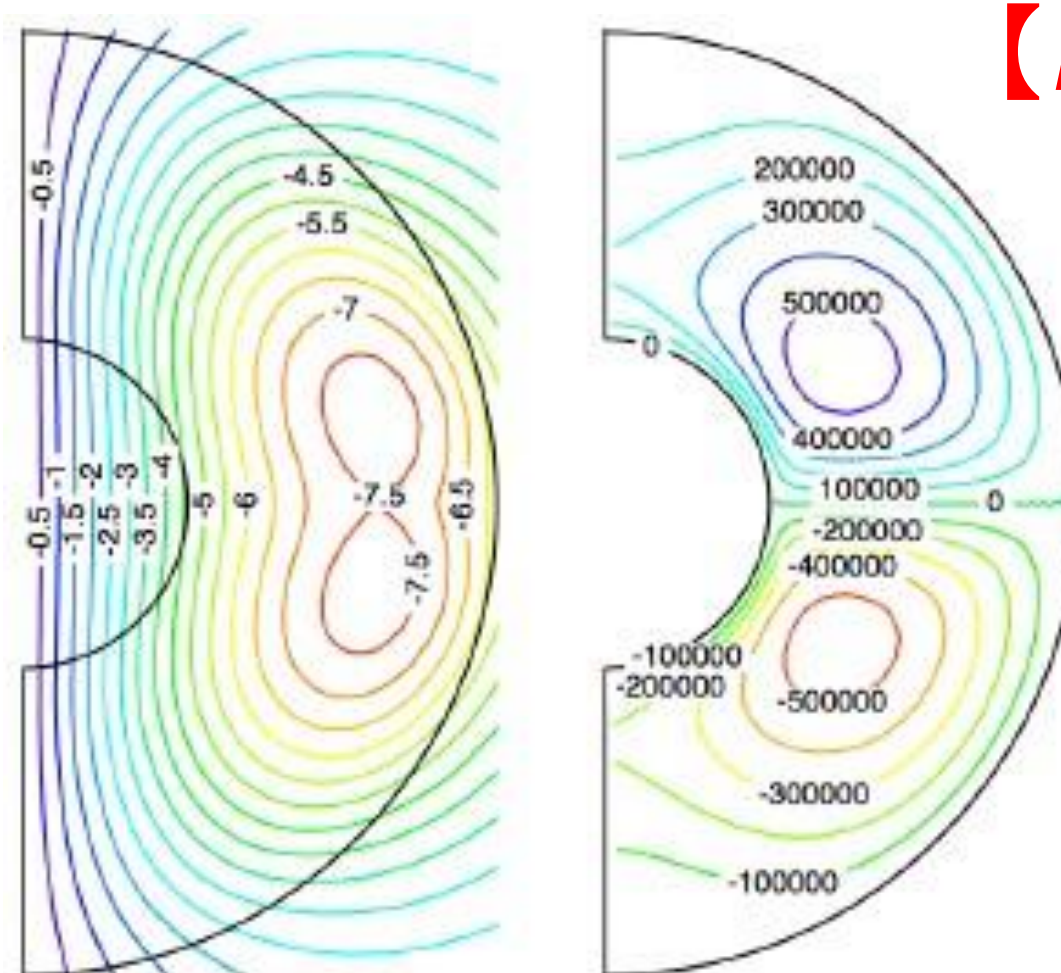

Estimating a scalar source by integrating flow simulation and measurement by robots

## Magnetohydrodynamic Turbulence

【Hamba Lab.】

Current and jet of magnetic reconnection

Magnetic field and helicity of rotating spherical shell

# Center for Research on Innovative Simulation Software

Conducted Research on  
Biotechnology and Medical Engineering

## Functional Proteins and High Performance Design

**[Sato Lab.]**

### Light Energy Collection

### Photoelectric Conversion

### Cytochrome

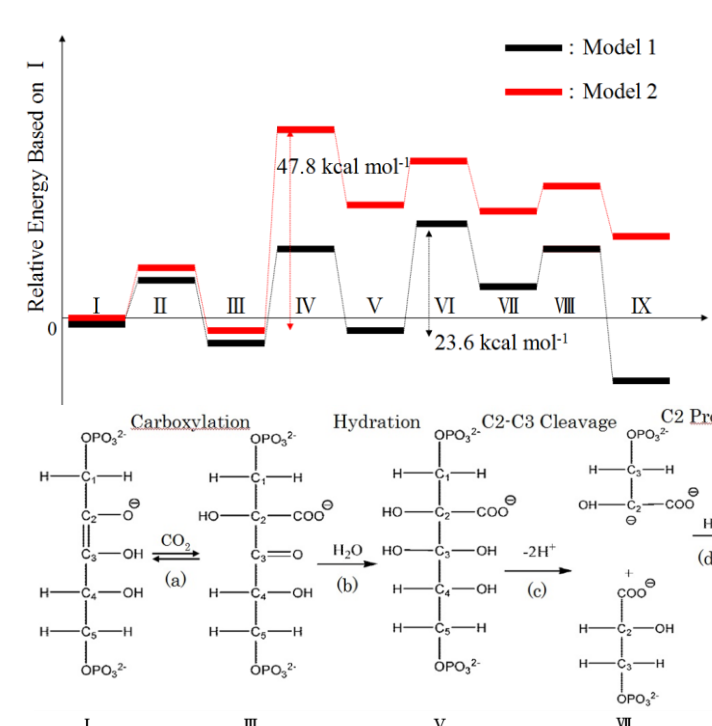

### Photosynthetic Reaction Center

### Hydrogenase

### Rubisco

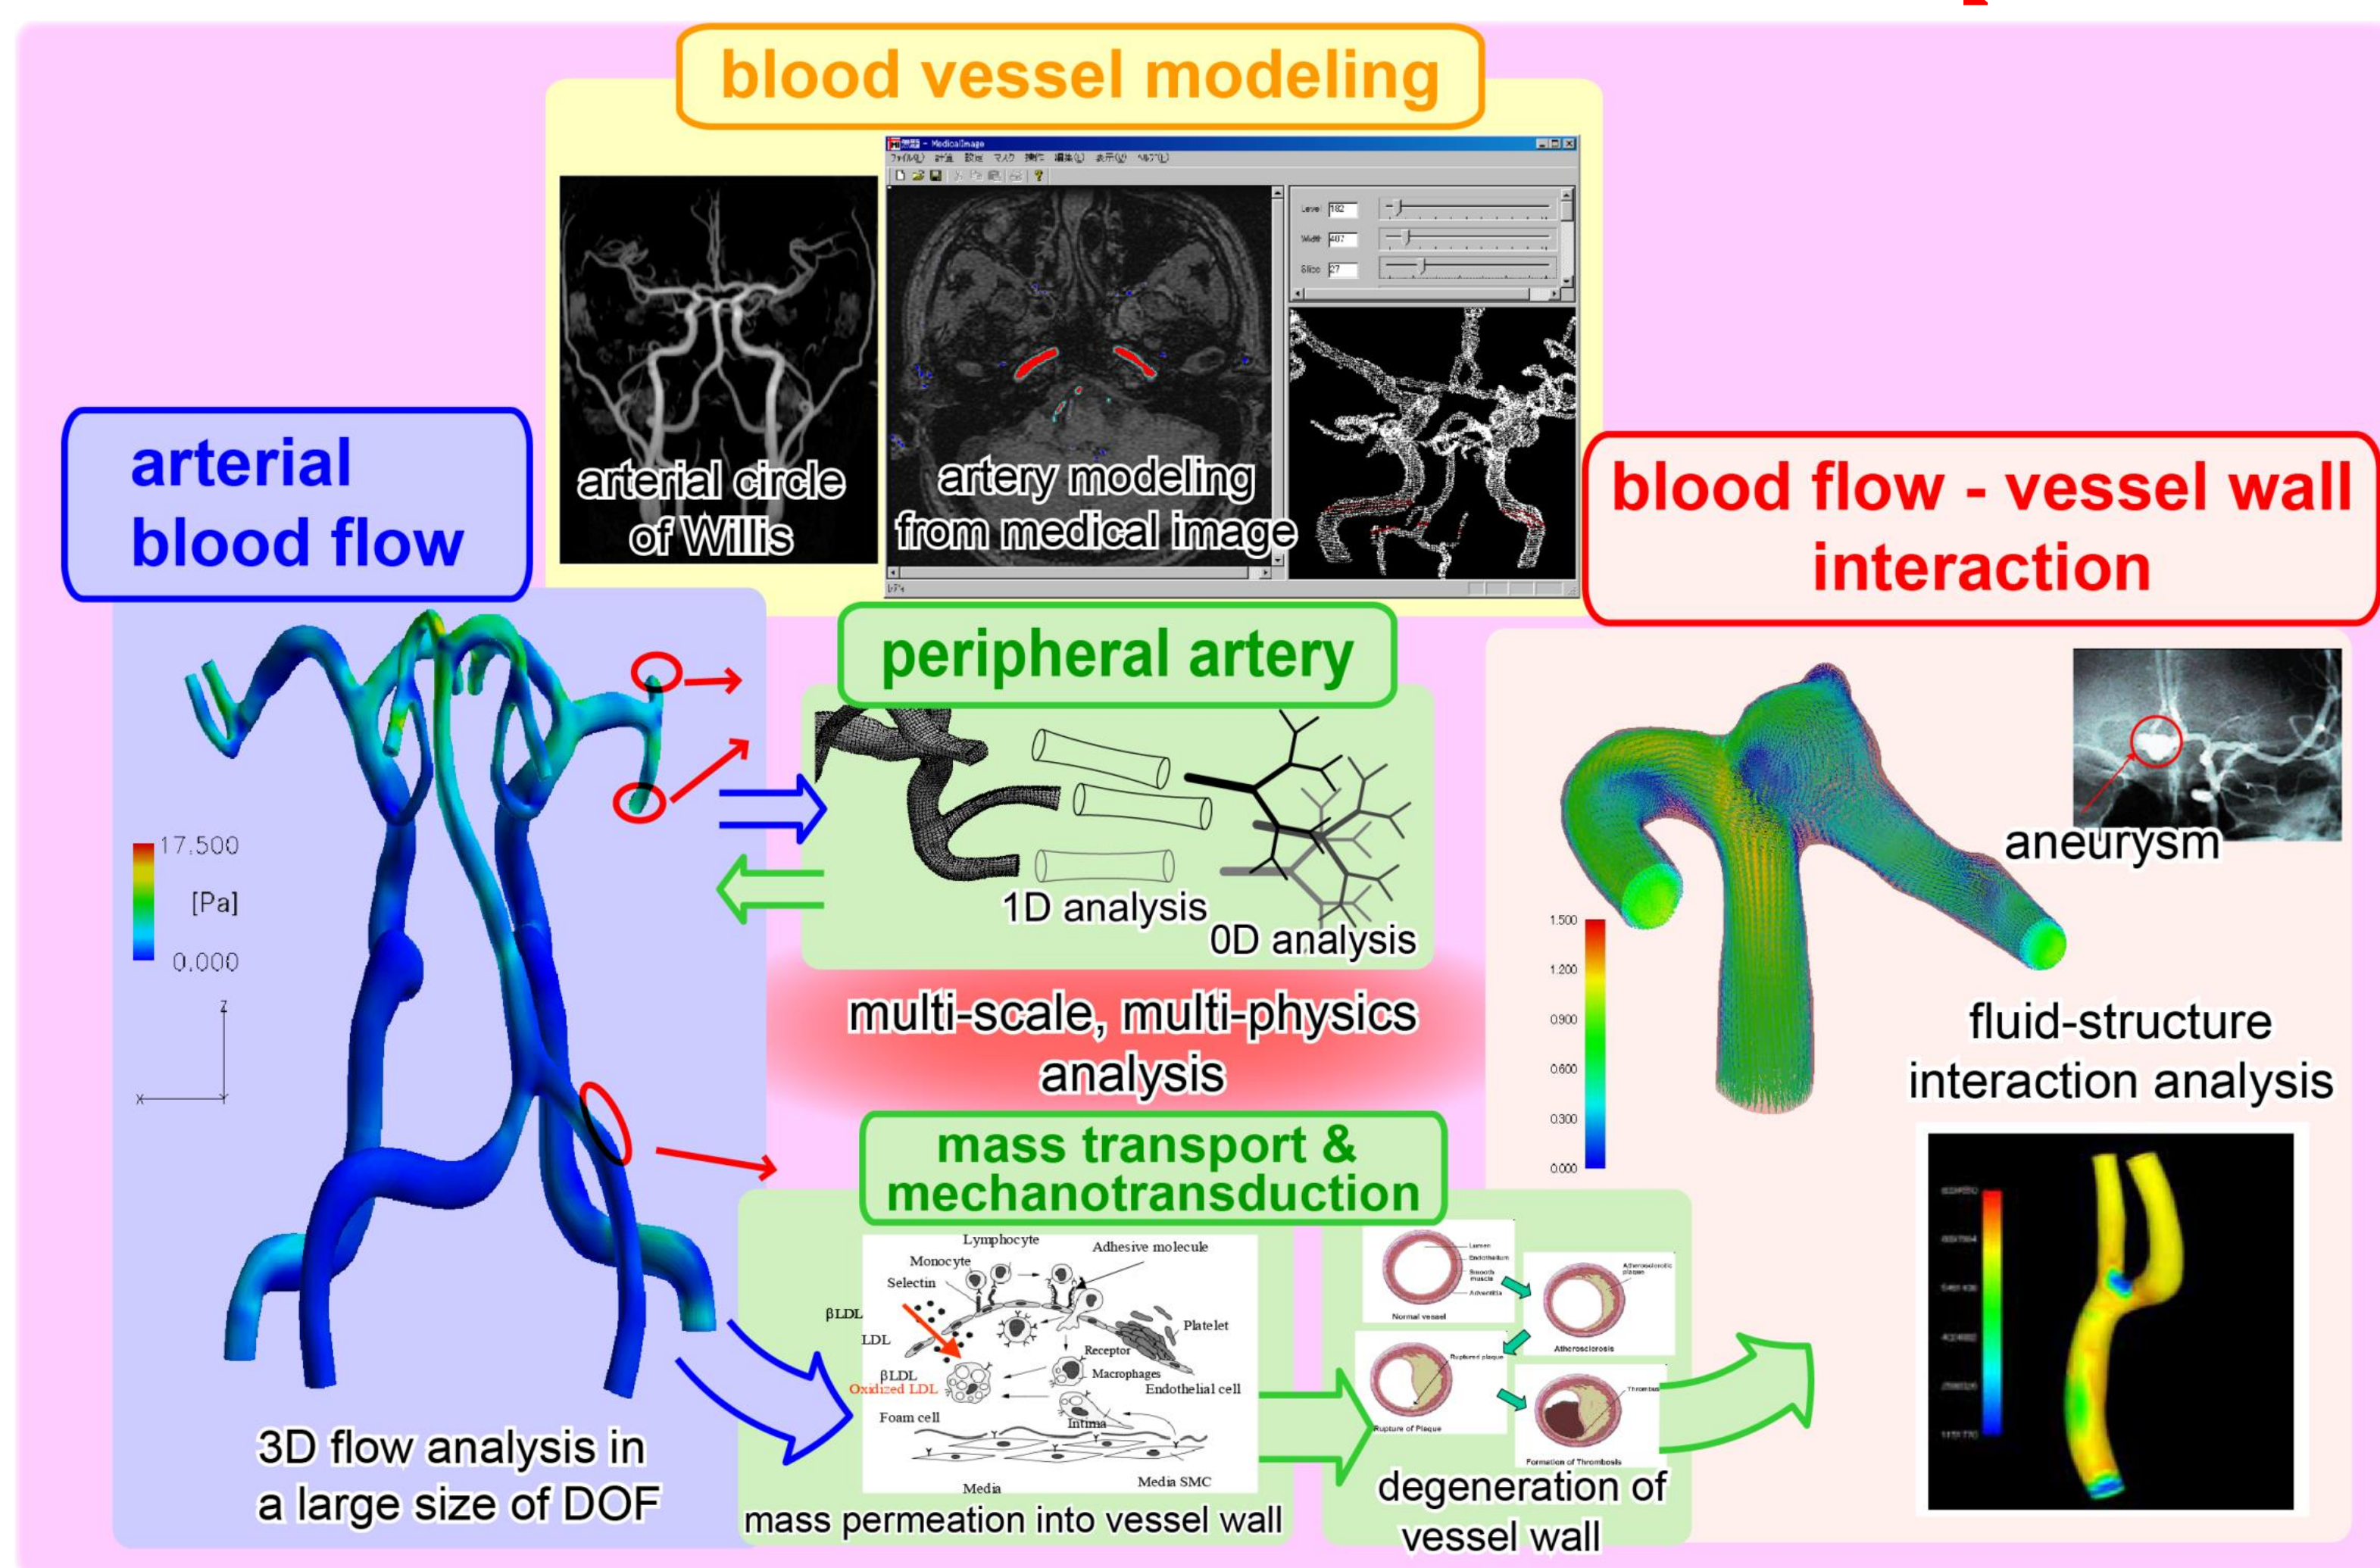

### Carbon Fixation

### Hydrogen Generation

## Multi-scale and Multi-physics Simulation for Circulation

**[Oshima Lab.]**

**Schematic illustration of integrated simulation system "M-SPhyR Circulation"**

# Center for Research on Innovative Simulation Software

## Conducted Research on Material Properties

### Machine learning for interface

【Mizoguchi Lab.】

Interface structure determination using Artificial Intelligence (AI)

### Multiscale Simulation for Material Structure, Deformation and Fracture

【Umeno Lab.】

FEM simulation of mode transition of crack propagation in rubbers

Atomic modeling of neodymium magnet interface

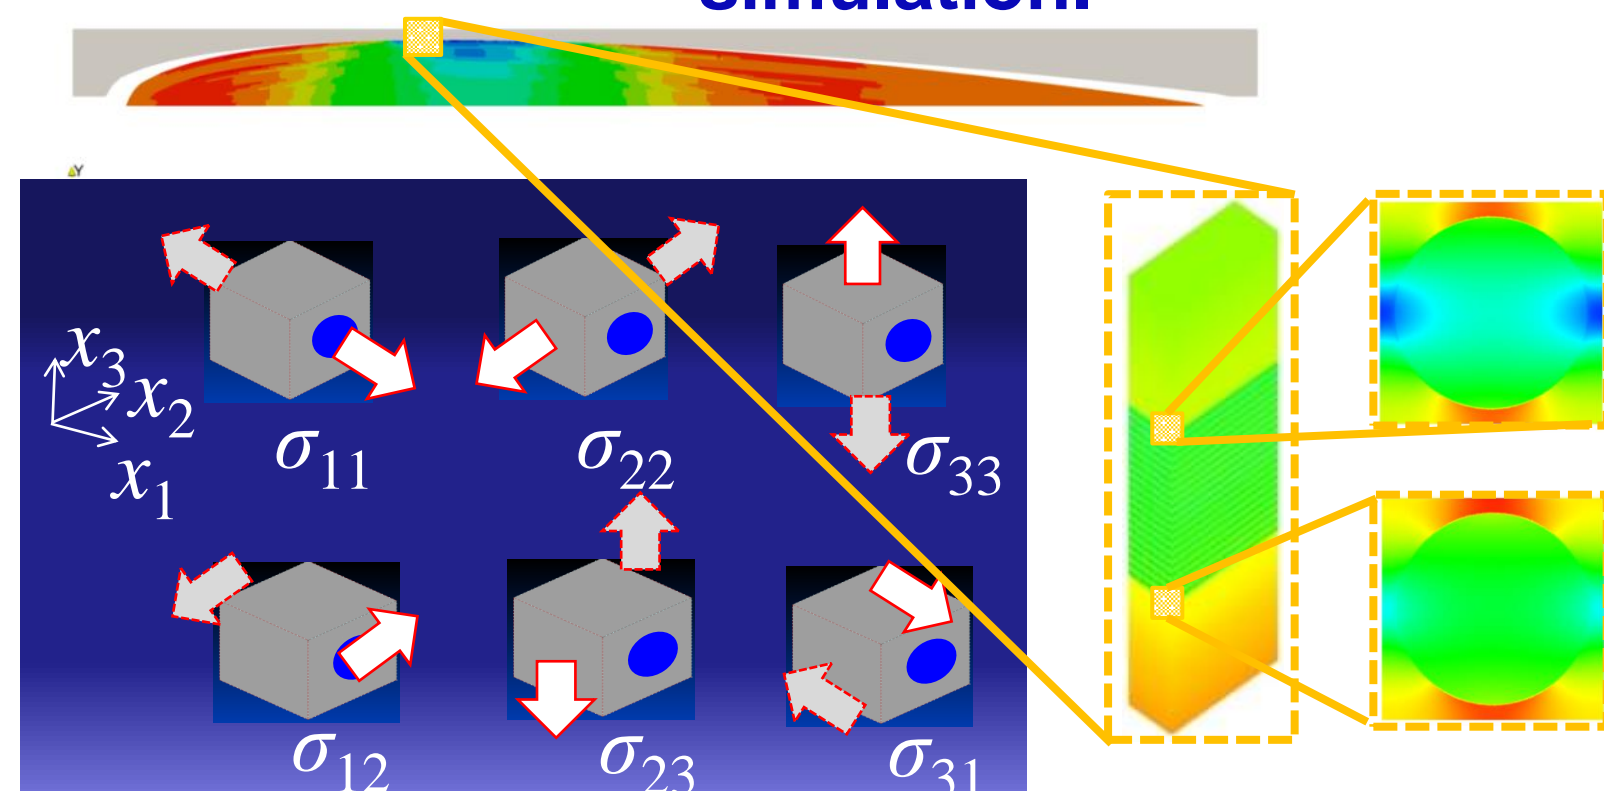

Atomic modeling of fracture in SiC crystal

### Multi-scale simulator to develop high-efficiency CFRP jet engine

【Yoshikawa Lab.】

Defects evaluation of thermoplastic molding member has been performed by zooming simulation.

### Artifact monitoring

【Nagai Lab.】

Failure of beam-column joint part of reinforced concrete by RBSM

Residual structural performance of corroded reinforce concrete

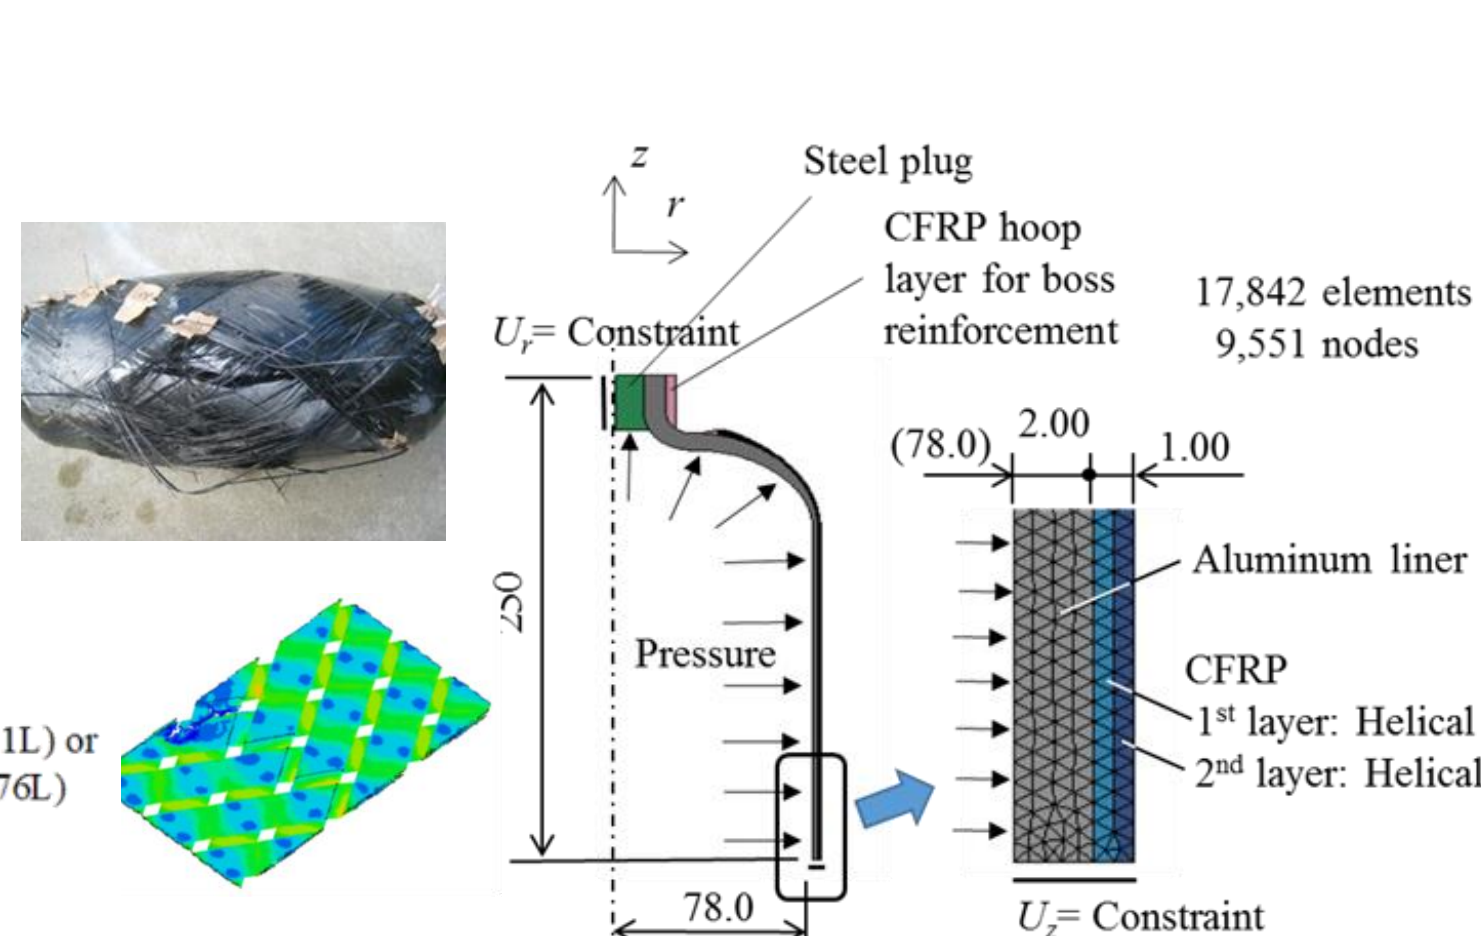

### High Performance Computing for hydrogen society promotion

Meso-scale simulator has been developed for accurate fracture prediction of composite pressure vessel.

【Yoshikawa Lab.】

Pressure cycle life prediction by crack propagation simulation

Burst pressure prediction by meso-scale simulation
