

# DynaMed Shared Decisions™

Informed decisions.  
Better Outcomes.

DynaMed Shared Decisions offers a robust collection of tools to enable patients and providers to have meaningful and informed shared decision-making conversations leading to improved outcomes and higher patient satisfaction.

The content covers a variety of specialties and is designed to be easily digestible for the patient. Developed by a team of clinical experts, using the most current evidence available, DynaMed Shared Decisions is focused on the questions patients most frequently ask when they need to make preference-sensitive decisions. The tools can be quickly shared via link or PDF with the patient pre-visit allowing him or her to arrive prepared.

# Why DynaMed Shared Decisions?

## For Patients

DynaMed Shared Decisions help patients take an active and engaged role in their healthcare decision making. The tools can be easily consumed prior to an appointment with the healthcare provider and allow patients to prepare or after an appointment to prepare for their follow-up appointment. DynaMed Shared Decisions encourages patients to explore what matters most to them and go into a visit with an informed idea of the best option that matches their values, needs and preferences.

## For Healthcare Providers

The tools and topics found in DynaMed Shared Decisions are carefully curated by clinical experts, evidence-based and continually updated, giving clinicians peace of mind that the information they are using to engage in shared decision-making is based on current best practice. In addition, DynaMed Shared Decisions tools allow providers to easily uncover patients' values, concerns and unique preferences to ensure the treatment chosen is the best fit for each patient.

## For Health Systems

DynaMed Shared Decisions helps health systems meet regulatory requirements, increase patient engagement and compliance and reduce risk of litigation. Satisfied patients and providers attract more patients and providers leading to better financial performance for the institution. Also, institutions often create their own shared decision-making tools, but upkeep can be onerous. DynaMed Shared Decisions does the work for you.

## For Health Plans and Risk-Bearing Entities

Research shows that shared decision-making and the use of patient decision aids results in more conservative decisions, improved patient adherence and reduced costs. Integrating DynaMed Shared Decisions tools into health plan platforms brings evidence-based care to the entire network and drives patient engagement and satisfaction.
