iTaxMaps
A CIVIL SOLUTIONS INNOVATION

At **Civil Solutions** we focus on building Intelligent TaxMaps to deliver maximum value for the investment you are making.

Our team of application developers, GIS Specialists, land surveyors, and data management experts work together to develop the right tools to reach your objective.

The iTaxMap was specifically designed for tax mapping at any project scale. It combines proven methodology, enhanced data management tools, and a suite of user-friendly applications which allows the user to cut costs and improve efficiency.

Since 1995, we have...
- Integrated a variety of disciplines to enhance tax mapping;
- Extended the discipline into numerous municipal and county functions;
- Formed a network of specialty consultants to solidify the systems integration;
- Augmented our internal staff to handle the variety of skills necessary in order to work effectively and efficiently.

In the past, it was sufficient for tax mapping to be isolated in the Office of the Assessor as simply a tool to aid in the assessment and valuation process. Now, however, **jurisdictions have realized that Tax Maps are a foundational element within their informational infrastructure.**

Intelligent TaxMaps are different than traditional tax maps. They are built differently in order to easily extend to many beneficial functions and uses. Intelligent TaxMaps are more than just digital.

A PROVEN PACKAGE

1

THE CIVIL SOLUTIONS COLLABORATION CENTER

We created the Collaboration Center to give our clients and their various GIS users a single location where they can go to submit tax map changes, get maps, see what is happening with respect to property adjustments, communicate with one another, and learn how to improve their GIS skills.

2

MY INTERNET DATA VIEWER

Our MyiDV is built upon the latest Esri technology and used by over fifty local and county governments in New Jersey and Pennsylvania to serve a number of purposes. Civil Solutions supports the site administration and has established a scheduled update process that maintains "fresh" data on the site each week.

3

EZM4 CLOUD CONVERSION UTILITY

The iTaxMap also incorporates our utility that preprocesses the MOD IV data, runs the comparison with the Tax Map parcels, and produces a variety of QA/QC reports.
