

Looking Forward to
the *Roaring 20's*

About Us

Founded in 1989, Britton Industries is the leading transformor of vegetative and concrete waste resulting in environmentally sustainable resources that benefits both our communities and our planet. At Britton Industries, we are committed to providing our customers with an unparalleled level of service and a superior product. Our state-of-the-art Class B Recycling centers invest in the latest green technology to virtually eliminate emissions and minimize our environmental impact.

Our Values

Efficiency

Our core service results in repurposing resources to create minimal impact on environment and consistently providing a high quality product

Innovation

We listen to our clients, search the market, and when needed- invent a better process. From the ground up, we work to continuously improve our products and services to deliver the best in the business.

Teamwork

At Britton Industries we team with our clients. As the subject matter experts in our industry, we strive to be the reliable resource that helps you exceed your goals

What Our Clients Are Saying...

"After experiencing a major storm, most of our town sustained a great deal of damage from fallen trees. After stockpiling more than 19,000 cubic yards of brush and tree parts, Britton Industries provided a reasonable quote and mobilized quickly to grind and remove the debris. We were impressed with their efficiency and professionalism and had them return to grind and remove another 8,000 cubic yards of debris, once our crews finished the cleanup. They responded quickly and removed the debris in a timely fashion! I would recommend Britton Industries for all your commercial vegetative grinding and removal needs."

Richard Parks, Director of Neighborhood Services, Township of Medford, NJ

"We are well into our second decade as a Britton customer. There are many reasons why a business relationship lasts that long; among those reasons are quality of materials, timeliness of the delivery, and competitive pricing. Britton Industries comes through for us on all of those reasons and many more."

Jerry Levanduski, President, Levanduski Landscapes

"Over the past 11 years, we have tried many different mulch colorants. However, none of them have produced a nicer or long lasting color than Britton Industries mulch colorant has for us. The product result is fantastic and so is the customer service."

Curt Leonberg, President, Leonburg Nursery

"Britton Industries has been our primary mulch supplier for over 8 years. We have also purchased topsoil from them on occasion. Their service has been exceptional. We have been getting 1 to 3 loads of mulch a day, all season long, with no problems."

Kevin Lyon, General Manager, Belle Mead Co-op.

TRIPLE Ground Process

Britton Industries processes over one million yards of product annually. This allows us to service any size commercial operation, institution or county, all with the same quality and attention to detail.

Premium Dyed Mulches

Our triple processed, premium enhanced mulch products are available in Black, Brown and Red. They are manufactured by grinding and blending select hardwoods with our long lasting, vibrant and environmentally friendly colorants. Our state of the art manufacturing process is guaranteed to keep your customers coming back for more. Our color enhanced mulch products will accent any landscaping project.

Hardwood Mulch

Our premium quality, triple ground root mulch is aged to a darker, richer and finer texture than regular hardwood mulches. This process creates a product that spreads easily, allowing it to cover a wider area while providing beautiful color, moisture retention and weed suppression.

SafePlay Playground Mulch

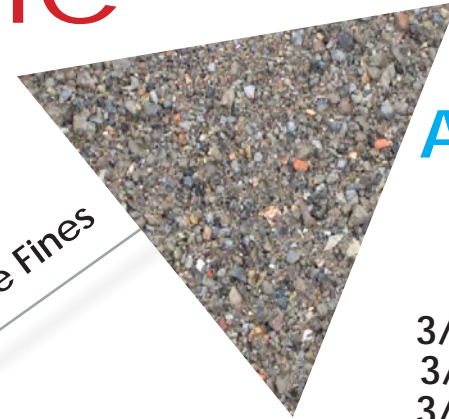

Britton Industries manufactures the highest quality certified playground mulch for municipalities, schools and recreational facilities that require a safe and inclusive environment. We are IPEMA certified and our playground mulch is produced from 100% virgin wood chips which contains no chemicals or artificial ingredients. Our playground mulch meets and exceeds ASTM standards set by the Consumer Product Safety Commission (ASTM F1292-09) and EN-71 and can also be used in accordance with ADA design specifications.

LAND CLEARING

25

Years of Experience

With over twenty five years of experience Britton Industries has the expertise and equipment to quickly mobilize the resources to manage the full scope of your project. Turn to us for a reliable and cost efficient solution for every aspect of your landclearing and grading of any size residential and commercial parcel.

One Provider for
Your Entire Project

Our Fleet of Trucks

With our 30 walking floor trailers, Britton Industries has the ability to mobilize the perfect combination of manpower and equipment to get your job done correctly.

Estimates, Grading & Hauling

To reduce the costly disposal and burden on landfills, we employ our state-of-the-art wood grinder to process whole stumps into grindings. Then our fleet of walking floor tractor trailers removes the grinds off-site.

specification

**WE KNOW
SOILS...**

TOPSOIL, COMPOST, FILL DIRT & CUSTOM BLENDS

Our fine screened topsoil is a great multi-purpose soil designed for trees, shrubs, grass, and other plants that need organic material to thrive. We offer a number of custom soil blends and will design them specifically to meet any specification. We make all of our product on premise, which allows us to manage the entire creation process. We test the application and create highly specialized topsoil mixes for complex applications, such as golf courses and athletic fields.

SCREENED LEAF COMPOST

Our leaf compost provides a high concentration of organic matter that is lacking in many of today's landscapes. It is inspected daily to test the application and turned to ensure proper aerobic microbial activity. This constant attention guarantees a dark, rich consistency that produces the most effective result. The use of compost in heavy or dense soils increases its productivity, workability and porosity while greatly improving aeration and drainage.

FILL DIRT

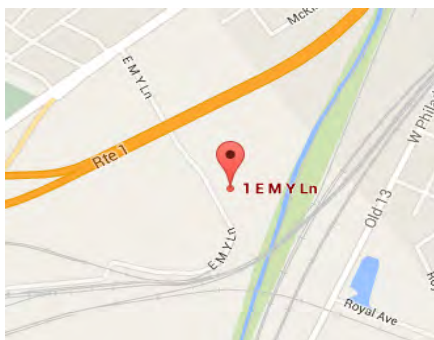

We provide fill dirt in New Jersey and Pennsylvania projects that require a product that compacts well and contains little to no organic material. Our fill dirt is the result of our own soil screening operation, so it is a tightly controlled product incorporating subsoil, shale and rock. While others may use almost anything as a substitute of fill dirt, our product is screened and graded for consistency and uniformity and is still cost effective.
