

***THE FUTURE OF
COMMUNICATIONS
HAS ARRIVED***

MUNISITE NETWORKS is uniquely positioned to relieve public resources of the onus of handling the impending voluminous applications from wireless carriers as they attempt to deploy their 5G networks.

MUNISITE NETWORKS handles all wireless installation applications, offers a variety of installation options, including modern and visually appealing street furniture, and replacement wood poles.

With a combined wireless development experience of over 60 years, **MUNISITE NETWORKS** is your resident expert.

TIME IS MONEY...

Your employees can return to their jobs freed from the burden of managing wireless carrier applications. Not feeling it yet? You will. Experts estimate for every traditional cell site, new technology will require as many as twelve separate installations.

MUNISITE NETWORKS works for you to ensure uniformity and compliance in carrier applications and offers drastically improved communications services to your locale without the traditional cell site blight.

HOW WE HELP YOU

Munisite Networks will handle all applications for wireless installations in your public spaces – sidewalks, intersections, parks. Think of us as a service manager. In order to sustain modern technological improvements, cell sites are getting smaller and closer to the customer (your residents), but a lot more of them are required.

1. **Management** – It's hard enough for most municipal staffs to handle one or two traditional cell site applications in a year. Think of handling ten or twelve from each carrier!
2. **Services** – Everyone wants better service but no one wants to see the tower. We don't either! We offer an array of proprietary designs for the structures that will house the equipment – from decorative lightpoles and smart kiosks in downtown areas, parks, and bustling hubs, to wood pole replacement on residential streets, we have the solution that will make your residents happy without having to see the ugly cell sites of the past.

3. **Delivering the Future** to your doorstep – people hear about wireless devices, carriers and cell sites and think of the phone calls or accessing Facebook at the bus stop. We can provide so much more:

- a. Enhanced E911 Services
- a. Public Wifi
- b. Electric Vehicle Charging Stations
- c. Security Cameras
- d. Interactive touch screens to use for whatever your residents and officials desire – advertising local businesses, paying for parking, directions to parks and ball fields, and much more
