Triple Threat Combination

WILDLAND ENGINE, FIRST RESPONDER, RAPID INTERVENTION UNIT

F550 Skeeter Type 5 Wildland Engine

Skeeter Brush Trucks were designed with the collaboration of wildland firefighters and engineers. Our solution is a true custom wildland apparatus manufactured to NWCG standards. We put emphasis on protecting the chassis and body through reinforcements and armor to take the personnel and equipment to the fire and fight offensively while minimizing manpower.

Our **Custom Front Bumpers** are built out of aluminum or steel and designed to accommodate over two dozen options. We can paint, powder coat, or leave it brushed aluminum for a clean appearance and ideal for operating in the brush. Our bumpers can be equipped with 4" or 7" HID driving lights, fixed or receiver mount winches, tow eyes, cameras, speakers and emergency lighting. Further customize your bumper with a remote-controlled turret, sweep nozzles, or 1.5" discharge and hose tray.

Strength, durability and flexibility. Each body design is engineered for proper strength, weight, and balance in either a 92" or 96" wide model and designed for 20 years of extreme wildland service. Our bodies are built on a TIG welded aluminum substructure (5" I-Beam frame rails with 3" I-Beam cross-members on 12" centers). The bodies are then aluminum skinned and spring-mounted to the chassis frame to allow for strength and flexibility. Skeeter Brush Trucks have been pump tested at sea level up to 12,000 ft. to ensure reliable performance. Each body is NFPA flex tested in all attitudes while flowing water to all discharges to ensure our quality standards and design are properly met.

Durable Aluminum Body Construction

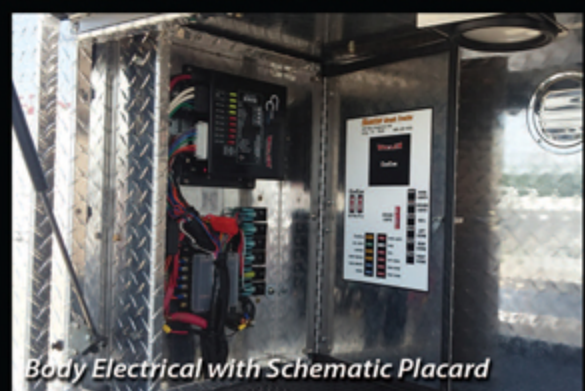

Specialized Custom Bumpers

Off-Road Suspension & Skid Plating

Intuitive Single Operator Design

Body Electrical with Schematic Placard

SERVICEABILITY

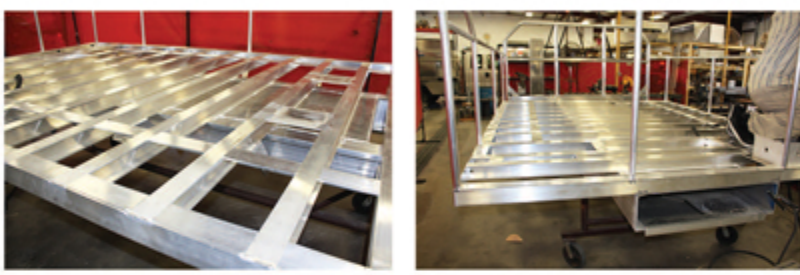

- Stainless steel & flex hose plumbing allow for field repairs in minutes.
- Full accessibility to pump, plumbing, and valves.
- Complete body electrical enclosed in a single, easy access, panel.

FIREFIGHTER SAFETY

- In-cab operations minimize manpower in a safer environment.
- High-visibility 360 degree HID & LED scene lighting.
- Cameras give the driver a better view of what's behind and ahead.

EXTREME OFF-ROAD MOBILITY

- 6" Four Link off-road suspension
- 20" ballistic, load range M, super single tires
- custom chassis and body armour

All Aluminum Construction
Light-weight all aluminum construction offers better corrosion resistance, and increases weight capacities for additional water, hose, and equipment.
