

TPASS[®] Visitor Management Features For COVID-19 and Contact Tracing

TPASS has added features to help record and track COVID-19 relating to your students, staff, and visitors.

If you are required to perform health screenings at your facility, consisting of any combination of questions and temperature screening, it's important to have a Visitor Management System to capture and associated the collected data with a visitor's demographic information. This is paramount when it comes to providing Contact Tracing Reports.

Health Check box conveniently placed on the dash board. It will help you record and track your specific health check information as it pertains to each individual entering the building.

When the tracked information is associated with individual enrollees within TPASS, it is possible to flag a visitor and stop them from entering during a customizable, designated quarantine period.

TPASS[®] Visitor Management Features For COVID-19 and Contact Tracing

Our system allows for a Contact Tracing Report to be generated, which included a list of any visitors who may have come in contact with someone who either failed the health check performed at your facility or, has tested positive for COVID-19.
