

H200[®] Wireless

HELP PATIENTS REGAIN MORE NATURAL HAND FUNCTION WITH H200 WIRELESS

The **H200 Wireless** Hand Rehabilitation System was designed to provide proprioceptive input in synchronized muscle activity. The **H200 Wireless** is used by patients to perform therapeutic and task specific activities to improve lost hand function as a result of:

- ☎ Stroke
- ☎ Traumatic Brain Injury
- ☎ Spinal Cord Injury

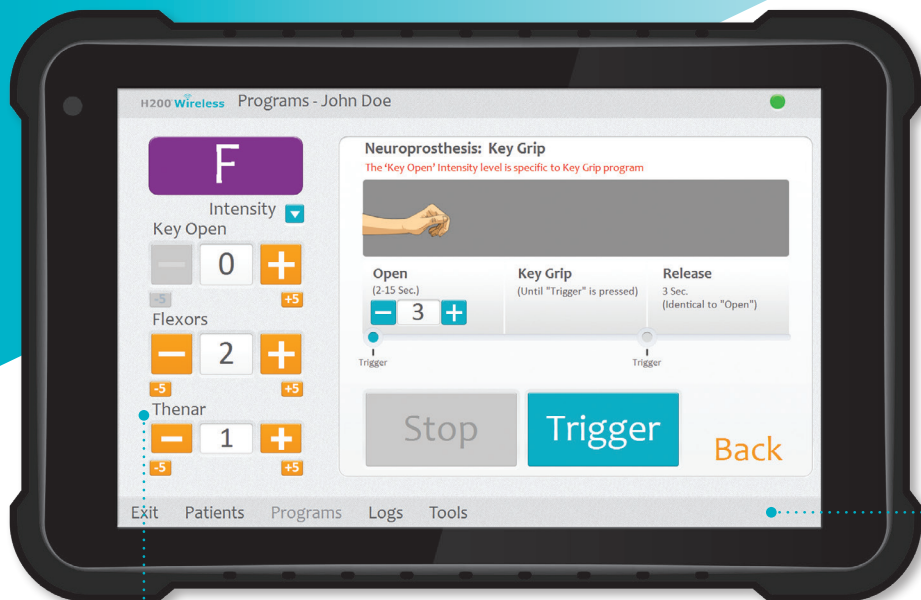

The **H200 Wireless** has two main components: the functional stimulation support (orthosis) and the wireless control unit (microprocessor) and is intended to:

- ☎ Improve ability to perform activities of daily living¹
- ☎ Reduce muscle spasms²
- ☎ Improve voluntary movement of the hand and wrist
- ☎ Reeducate muscles over time

Additionally, the system may reduce or prevent secondary complications, maintain or increase range of motion, increase local blood circulation and prevent or decrease muscle atrophy.

THERAPEUTIC REEDUCATION JUST GOT EASIER

NEW H200 WIRELESS PROGRAMMER

*Easy Setup and User-Friendly
Control Interface*

Independent Thenar Control

Dedicated
programmer with
HIPAA compliant
database

Allows for higher
level activities

Customize settings
and programs for
home use

Track outcomes
and monitor
compliance

Gives complete
control of stim
delivered via program
or manually

Allows the patient
to engage in
bi-lateral activities

Digitally set FES
levels based
on exercise
and activity
