

## Texas NeuroRehab Center (TNC) Acute Neurology Management Program

The Acute Neurology Management Program at TNC is supervised by on-site neurologists. Individualized treatment plans, neurology management and frequent reassessment assure aggressive treatment and positive outcomes. The goal is to manage brain injury along with other illnesses and control environmental factors. These services are offered on an inpatient basis.

### Diagnosis' Treated

- Acquired Brain Injury (from traumatic and non-traumatic experiences)
- Stroke (CVA)
- Other neurological disorders and complications

### Comprehensive Services

- Daily physician-directed program with "hands on" evaluation and patient care (24-hour nursing and direct care staffing)
- 1:4 Patient to Nurse ratio (determined by patient acuity)
- Neurology Care Team includes: On-site neurologists, neuropsychologists and registered nurses
- On-site radiology
- Evaluation of environmental factors that may affect brain injury
- 24/7 Respiratory Therapy & advanced ventilator and tracheostomy treatments
- Treatment of chronic and long term neurological effects
- Increased mobility with assistance of physical therapy staff and treatment team
- Collaboration with referring professional by on-site neurologists
- Patient and family education regarding self care and prevention
- Private rooms
- Interdisciplinary team to address co-morbidities
- Case management and social work services
- Participation in intensive rehabilitation therapy program
- Opportunity to transfer to inpatient or outpatient post-acute brain injury program at discharge.
