|| Rehab's #1 Multidisciplinary Therapy Solution Just Got Better.

BITS 2.0 features a range of enhancements that improve your ability to assess, challenge and track patient progress - all in one streamlined and easy to use solution.

Patient Personalization allows for uploading of custom images and text for use in therapy programs.

3 Hardware Configurations to fit the needs of your clinic and patients.

28 Therapy Programs for OT, PT and SLP make BITS a robust, multidisciplinary tool.

Baseline Comparisons quantify results to illustrate progress and where more work is needed.

4 Standardized Assessments offer an efficient method to administer tests, benchmark performance and capture results.

Preset Parameters allow you to jump right into therapy using predefined settings.

BITS is intended to challenge and assess the physical, visual, auditory, and cognitive abilities of patients with deficits resulting from traumatic injuries and movement disorders as well as competitive athletes.

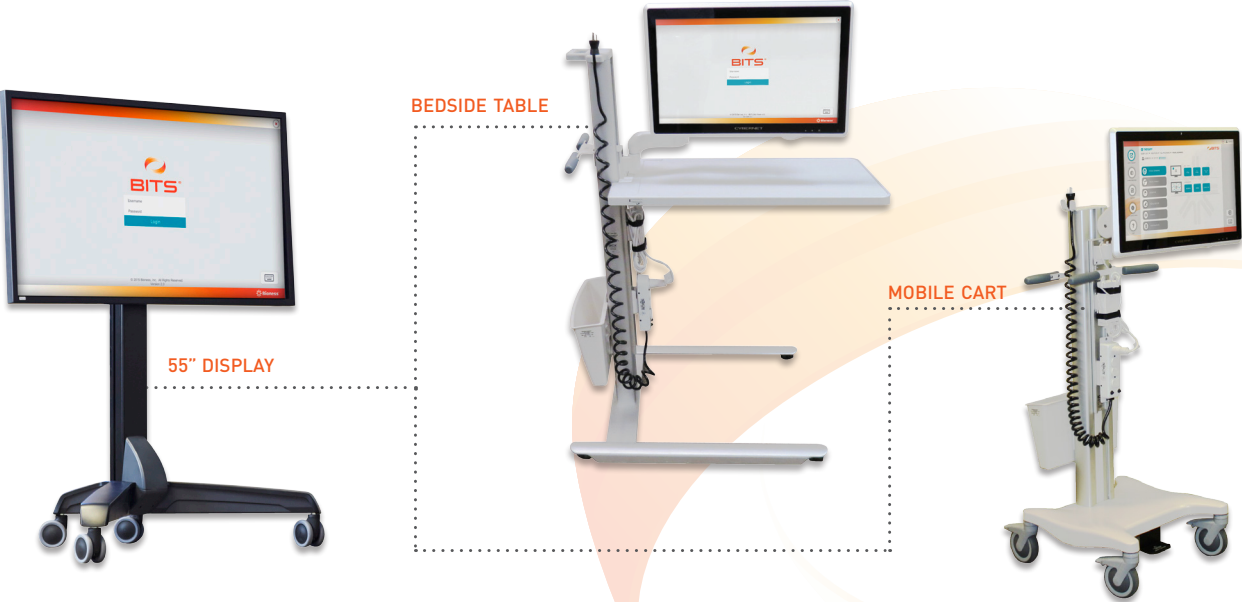

Therapy Category	Clinical Focus
VISUAL SCANNING (6 programs)	Visual motor coordination, scanning, reaction time, peripheral awareness
VISUAL PURSUIT (5 programs)	Visual tracking, motor skill planning, cognitive skills
COGNITIVE (2 programs)	Working memory, visual/auditory processing, impulsivity, timing
VISUAL MOTOR (5 programs)	Visual spatial perception, motor coordination, attention
CHARTS (6 programs)	Visual search, attention, visual/auditory processing
ASSESSMENTS (4 programs)	Visual motor coordination, scanning, cognition, reaction time

|| Bring the Power of BITS Within Arm's Reach.

55" DISPLAY CONFIGURATION The best choice for visual field therapy, the 55" display configuration works best for challenging balance, weight shifting, range of motion, reaching and more.

BEDSIDE TABLE CONFIGURATION is ideal for patients who are confined to their bed or have limited mobility. Promote patient engagement early by challenging cognitive and motor abilities.

MOBILE CART CONFIGURATION is best for smaller treatment rooms and speech therapy offices. Perform therapy while seated in combination with table-top activities or position close to the floor while patients maintain pre-gait stances.

	55" Display	Mobile	Bedside
STANDING ACTIVITIES			
PRE-GAIT ACTIVITIES			
OVER-THE-BED POSITIONING			
HOSPITAL ROOM			
VISUAL FIELD TRAINING			
UPPER EXTREMITY ROM AND REACHING			
SMALL SPACES			
PORTABILITY			

BITS ASSESSMENTS

Eliminate paper-based assessments and save time with BITS. Digital assessments allow for quick evaluation and immediate result analysis. Launch assessments in full screen or scale down to replicate traditional paper sized tests.

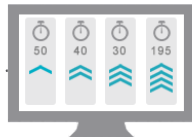

Trail Making Assessment challenges working memory, visual attention, and task switching.

Bell Cancellation Task allows for a quantitative and qualitative assessment of visual neglect.

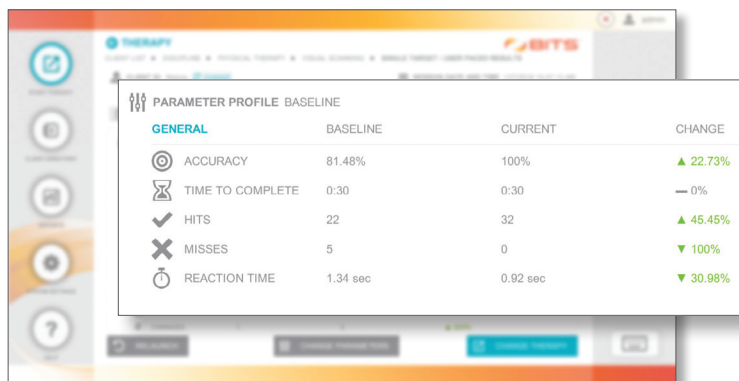

Maze Test assesses attention, visuoconstructional ability, and the executive functions of planning and foresight.

Visual Scan & Motor Reaction assesses visuomotor coordination, peripheral awareness, hand speed, reaction time, and endurance.

BITS SMART REPORTS

Documenting outcomes is easier than ever before. BITS processes patient results automatically with simple-to-use charts and graphs. In addition, customize progress reports with facility branding and contact information.
