Childhood Trauma & Resilience

A Practical Guide

Heather C. Forkey, MD, FAAP; Jessica L. Griffin, PsyD; and Moira Szilagyi, MD, PhD, FAAP

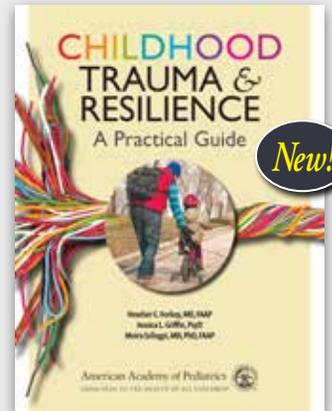

Trauma-sensitive care is emerging as a critical component of pediatric best practices. With this new practical guide, pediatricians and other child health professionals will learn to identify, evaluate, and treat children and families affected by trauma and adversity when they present at the office.

In addition to instruction for acute, hands-on care, the cohesive approach offered in this guide lays out a framework and concrete steps to transform practices into ones that are trauma sensitive and can provide the best, most impactful care to all patients.

Childhood Trauma & Resilience includes mnemonics, charts, tables, and numerous case studies to reinforce learning, as well as timely information on physician burnout and secondary traumatic stress.

More than a dozen reproducible handouts on topics such as attachment, cultural connections, and promotion of resilience will help pediatricians engage with parents on these important topics and focus on the family factors that can help prevent and mitigate the effects of trauma.

Thinking Developmentally

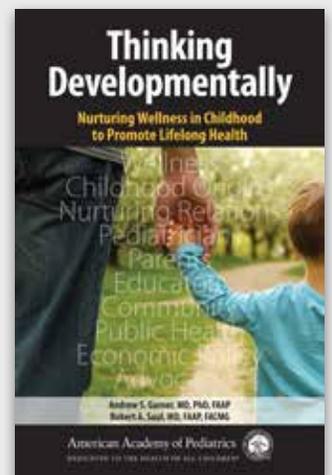

Nurturing Wellness in Childhood to Promote Lifelong Health

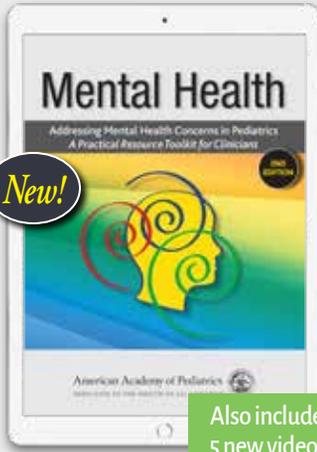

Andrew S. Garner, MD, PhD, FAAP, and Robert A. Saul, MD, FAAP, FACMG

Thinking Developmentally presents a clinical framework for understanding the impact of toxic stress and both adverse and affiliative childhood experiences on development. It makes a compelling case that many diseases of adulthood are not adult onset but rather adult manifest, based on genetic and epigenetic consequences from early childhood experiences.

Drs Garner and Saul examine the needs of children and the role of parents, caregivers, the community, and medical practitioners in ensuring that children have safe, stable, and nurturing relationships. They explore community empowerment and offer suggestions for applying developmental science to help bring about healthy children, nurturing families, and caring communities.

High Five Discipline

Positive Parenting for Happy, Healthy, Well-Behaved Kids

Candice W. Jones, MD, FAAP

When confronting the challenge of disciplining their children, moms and dads and other child caregivers often default to the ways their own parents disciplined them, sometimes with harmful results. In *High Five Discipline*, mom and practicing pediatrician Dr Candice Jones shows parents a better way. This positive parenting guide helps parents understand child development and the ways discipline shapes not only children's behavior but their overall health and well-being. Dr Jones coaches parents to understand their child's developmental stages and their own motivations to create a family discipline plan that manages misbehavior and encourages positive behavior. Her advice is packed with developmentally appropriate strategies to tame tantrums, stop sibling squabbles, and encourage better behavior, to create a calmer, more harmonious home.
