# COVID-19 Related Conditions: Care and Product Guide

# Caring for your patients with COVID-19

COVID-19 has directly impacted the lives of many in the U.S., and the number of affected patients and caregivers continues to grow.

Research on post-COVID-19 patients is showing that in some cases, the road to recovery can be long and complicated and potentially lead to other healthcare concerns. We want to help you better understand these implications and take care of your patients now and in the future.

Lack of oxygen and widespread inflammation due to COVID-19 can damage the heart, kidneys, liver, brain and other organs. It can also lead to risk of future illnesses such as acute respiratory distress syndrome (ARDS), heart conditions, stroke, kidney disease and pneumonia. A study of post-SARS patients shows that COVID-19 patients could be at risk of:

- Severe depression and anxiety
- Post-intensive care syndrome (PICS)
- Mobility issues
- Cognitive issues
- Mental health issues

In this formulary, we compiled products from national brand manufacturers, as well as our own McKesson Brands portfolio, that can be used in the treatment of conditions related to COVID-19:

- Pneumonia
- Heart disease and stroke
- Diabetes
- Kidney disease

**Product information on nutritional and fall prevention products is also included to assist in the patient recovery process.**

# Pneumonia
# & COVID-19

According to the World Health Organization (WHO), the most common diagnosis for severe COVID-19 is acute pneumonia. For patients who develop pneumonia, COVID-19 may be life-threatening.

## Common effects of COVID-19 on the lungs

- Inflammation that may damage the lungs' alveoli
- Fluid leaking out of blood vessels in the lungs
- Fluid accumulation in the lungs
- Gas exchange difficulties that limit oxygen intake or carbon dioxide expulsion

## Typical symptoms of mild-to-severe pneumonia

- Coughing
- Loss of appetite
- Nausea
- Vomiting
- Shortness of breath
- Fever
- Difficulty breathing deeply

## Compromised patients

Patients with conditions that weaken the lungs or immune system may be more vulnerable to COVID-19 pneumonia, especially those who are 65 or older. Those conditions include:

- Cancer
- Diabetes
- High blood pressure
- Severe heart disease
- Kidney or liver disease
- Asthma and other breathing disorders

## Treatment for COVID-19 pneumonia

- According to the CDC, inpatient care for those with severe cases of COVID-19 typically focuses on managing the complications.
- If a doctor suspects that a person is experiencing pneumonia, they may prescribe antibiotics even though this will not treat COVID-19.
- Patients with more severe pneumonia may need to stay in the hospital and receive intravenous (IV) fluids and monitoring. Those with breathing difficulties may need oxygen therapy or a ventilator.

## Misc. Items

| MANUFACTURER | MFR # | ITEM DESCRIPTION | UNIT OF MEASURE |
|---|---|---|---|
| Infection Prevention Products Inc. | IPD-POUCH2.0 | Pouch, IPD Microbiostatic with Drawstring, 9.5" x 11" | 10/PK, 10PK/BX |
| McKesson | 16-9203 | Bedside Bag, Polyethylene | 100/BG, 20BG/CS |

# Heart disease and stroke

Currently more than 1 in 3 adults lives with one or more types of cardiovascular disease. Heart disease is the leading cause of death in the U.S., with stroke ranking as the fifth leading cause of death. These two conditions, along with other cardiovascular diseases, are among the most costly health problems, accounting for almost $320 billion each year. They are also among the most preventable.

**The leading controllable risk factors for heart disease and stroke are:**

- High blood pressure

- High cholesterol

- Cigarette smoking

- Diabetes

- Unhealthy diet and physical inactivity

- Obesity

**The burden of cardiovascular disease is disproportionately distributed across gender, age, race/ethnicity, geographic area and socioeconomic status, driven by:**

- Prevalence of risk factors

- Access to treatment

- Appropriate and timely treatment

- Treatment outcomes

- Mortality

Sources:
https://www.healthypeople.gov/2020/topics-objectives/topic/heart-disease-and-stroke

https://www.heartandstroke.ca/articles/covid-19-what-the-data-shows

## Heart disease and stroke risk factors associated with COVID-19

**While COVID-19 is typically considered a threat to the lungs, there is also an additional threat to the heart.**
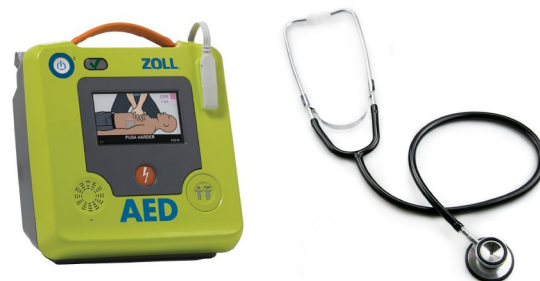

- Emerging data shows that people with heart conditions are 4 times more likely to die from the virus

- People with high blood pressure have nearly 2½ times higher chances of dying if they contract COVID-19

- Like other respiratory syndromes such as influenza, COVID-19 can cause injury to the heart—even in patients without a history of heart disease

- There is a 51% mortality rate for patients who suffer a cardiac injury while in treatment for COVID-19

**Patients who have experienced a stroke or other cognitive impairment also show an increased risk of serious COVID-19-related issues.**

- Emerging data shows that people who have had a stroke are 3 times more likely to die from the virus

- Stroke survivors who experience swallowing difficulties are at increased risk of having food go into the lungs and cause infection

- People living with stroke and vascular cognitive impairment (including dementia) may be especially challenged if they depend on others to help with daily needs

# Caring for patients with heart disease

Patients with heart disease or those who have experienced a stroke need medical care that helps them manage these conditions. Use this guide to find products that can help deliver the care patients need.

## PREVENTION

### Medication Compliance Tools

# Diabetes & COVID-19

Patients with Type 1 or gestational diabetes and Type 2 diabetes have a higher risk of severe illness from COVID-19, based on the information available at this time.

## What diabetes patients can do to protect themselves

- Continue taking diabetes pills and insulin as usual

- Test blood sugar and keep track of the results, as directed by the healthcare provider

- Keep a 30-day supply of diabetes medicines, including insulin, on hand

- Call the healthcare provider, nearest community health center or health department with any concerns or symptoms

Source: CDC.gov

# Caring for patients with diabetes

Though diabetes is a serious disease, it's also a highly treatable one. This guide provides you with a selection of products that you can use in treating your patients who suffer from diabetes.

# Kidney disease & COVID-19

Patients with chronic kidney disease of any stage are at increased risk for severe illness related to COVID-19.

## What patients with kidney disease can do to protect themselves

- Continue medicine and diet instructions from the healthcare provider

- Keep a 30-day supply of medicines on hand

- Report any new signs or symptoms of illness as well as any needs related to medicine or nutrition to the healthcare team, nearest community health center or health department

- Have shelf-stable food choices to help follow the appropriate kidney diet

## For patients on dialysis

- Contact the dialysis clinic and healthcare provider with concerns or symptoms

- Keep all treatment appointments

- Have enough food on hand to follow the KCER 3-Day Emergency Diet Plan for dialysis patients if unable to maintain the normal treatment schedule

Source: CDC.gov

# Caring for patients with kidney disease

Patients with kidney disease have specific treatment needs. Use this guide as a starting point and contact your McKesson Clinical Team to get help in developing a full product listing tailored to your patients' needs.

# Nutrition & COVID-19

As with many illnesses, good nutrition plays an important role in helping speed recovery from COVID-19. Making smart food choices can help deliver nutrients to support essential bodily processes and protect against loss of energy and muscular strength. Both macro- and micronutrients are key drivers for a healthy immune response, particularly for higher-risk populations.

Even for those who have not been diagnosed with COVID-19, poor nutrition can compromise their immune function and increase their risk of becoming infected.

## Basic nutritional guidelines for patients with COVID-19

### Fluids
It is critical that patients stay hydrated by drinking approximately 3 quarts (3 liters) of fluid per day. Ideally patients should drink 2-4 ounces of fluid every 15 minutes—preferably clear liquid beverages with calories and protein, oral rehydration solutions or sports drinks.

### Calories
Due to increased stress from COVID-19, an individual may need more calories than their normal diet provides. They should aim for a high-calorie diet of between 2,000 and 2,500 calories per day. Double or triple portion sizes of added fats and oils (butter, margarine, cream cheese, sour cream and avocado) can boost caloric intake, as can fruit juice, milk or other calorie-dense beverages.

### Protein
It's important that patients eat 75-100 grams, or 10-14 ounces, of protein each day. Good protein sources are peanut or nut butters, milk, eggs, yogurt, cheese, meat, fish, poultry and protein shakes.

### Supplements
Liquid supplements taken between meals can also provide an extra immunity boost and maintain the flow of nutrients into the body.

# Fall Prevention & COVID-19

A compromised immune system and weakness due to COVID-19 or other related conditions can increase the frequency of falls for patients. There are many steps that can be taken at home and in care sites that can improve safety and lower the risk of patient falls.

**For patients:**

- Stay hydrated

- Eat the recommended amount of protein

- Get adequate sleep

- Move slowly and be present in the moment

- Always have a way of letting someone know if a fall happens

- Practice balance and/or strength exercises daily

- Keep frequently used items within reach

**For providers:**

- Place mobility aids in the best position for self-transfer, or remove if self-transfer poses a risk

- Increase wellness checks for those at higher risk

- Educate all staff members on fall prevention

- Take extra care to reduce clutter and ensure clear pathways in your facility

- Promote uninterrupted sleep at night

| McKesson | 146-SSP20RBDDA | Wheelchair, 20", Reclining, SIN AXL, DDA, ELR, 300 lbs. Weight Capacity | 1/EA |

# General Infection Prevention Protocols

Though COVID-19 continues to pose critical challenges to patients and providers across the world, there are simple precautions that can and should be taken to help lower the risk of infection.

### Avoid contact
Maintain a safe, 6-foot or more distance from people other than members of your household.

### Wash hands
Wash your hands frequently using soap and warm water.

**Watch this hand hygiene tutorial.**

### Stay home
Remain at home and do not go out into public places if you feel sick.

**Please visit McKesson's infection prevention program to learn more.**

# Supporting you during the COVID-19 crisis

Healthcare providers are under enormous pressure due to COVID-19. And, we really want to help you. Here are a few additional resources to support your team as you work to provide great care for your patients.

- **Navigating Through COVID-19**
- **Reducing Hospital Readmissions**
- **Diabetic Skin Care Management**
- **Respiratory Care**
- **Point-of-Care Resources**
- **McKesson's FluWise Resources**
