DSN v20

Top-Tier Efficiency
and Operability

About DSN

DSN Software is a privately-held software development company that engineers distinct practice management software solutions for today's most advanced dental practices and dental specialty practices. Each of DSN's practice management software solutions integrates perfectly with the leading technology providers in their respective fields.

DSN

More Choices, More Ways to Benefit

Achieve peak performance. Take full advantage of these DSN features, plus enjoy all the benefits of our latest version.

Streamline Electronic Medical Records—Create and store patient records with ease. Generate letters and clinical notes instantly from unlimited customizable EMR templates. The clinical notes include comprehensive anesthesia and IV medication records and integrate with the largest selection of vitals monitors in the market. Within DSN's EMR module, view all historical patient records, letters, images, and identify potential drug interactions with full Lexicomp integration.

Comprehensive Implant Inventory Management—Implant Inventory is a unique feature that can be activated with any DSN product. Scan the QR code of supplies and they are automatically inventoried. Filter your inventory, generate reports, or track implants down to the patient with the Implant Tracker. You will be notified if you're running low, ensuring your office is always stocked.

Improve Communication and Collaboration With Referrals—Track referrals, run a referral analysis, and send files to other providers on an encrypted email platform for a seamless collaborative experience. File sharing is simplified, regardless of which software they're using. Encrypted emails are sent with a password to prevent unauthorized access and you can upload any referral forms to a patient's file.

Robust Reporting—With over 300 reports of critical data, practice management has never been easier. Quickly and easily generate production, collection, scheduling, and referral management reports to help create efficiencies throughout your practice.

Expedited Scheduling and Automatic Reminder—Scheduling is faster and easier with appointment templates, day blocking, and automatic appointment text reminders. Attach the patient's treatment plan to their appointment to easily view scheduled production and generate accurate treatment plan reports.

Multi-Specialty Capabilities—DSN v20 is the practice management software solution for the innovative multi-specialty practice. Teams of oral surgeons, periodontists, endodontists, and dentists can now effectively practice as a single entity. Clinicians can interact, collaborate, and grow a multi-disciplinary practice with the focus entirely on the needs of the patient. This is the new world of DSN v20.

Even More Tools for Your Success

The v20 E-services bundle of premier features optimizes your practice management at every turn.

E-Claims—Save time and submit claims electronically.

Real-Time Eligibility—Check coverage for most major insurance payers at the click of a button.

E-Prescriptions—Send medications with Two-Factor Authentication to any pharmacy—no paper necessary.

Email Encryption—Send secure emails to patients and referrals to prevent unauthorized access.

Online Registration—Patients fill out and submit user-friendly forms, which you input directly to their file.

Payment Integration—Integrate with an easy-to-use credit card payment processor to give patients more options.

Text Reminders—Leverage the instant communication platform to send automatic reminders or custom messages.

Two-Way Patient Texting—Communicate back and forth with patients via unlimited text in real-time. Perfect for curbside check-in, appointment rescheduling, surgical follow-up, and much more.

E-Statements—Send monthly billing statements electronically and let our software do the work for you!

DSN Cloud Imaging Get the Picture—Anywhere

Free yourself from the limitations of traditional hosted or closed-architecture imaging software. Easily view and share images anytime, anywhere—without data caps.

- Load and share images including CBCT in seconds, 24/7 from anywhere in the world
- Real-time CBCT imaging manipulation including 3D rendering
- Share images quickly and easily via encrypted email or secure login for referring doctors with complete cloud 3D enhancement capabilities
- Eliminate physical discs and multiple imaging programs to streamline your workflow
- Reduce your IT expenses and difficulty associated with on-site servers
- Integrated with the widest range of imaging brands in the industry
