

Black Talon Defender

The Smartest Way to Secure Your Business from Cyber Criminals

The Problem: A False Sense of Security

A firewall, anti-virus software, patching, Cloud backups and having an IT company are not solving the cybersecurity problem. Businesses of all sizes are still falling victim to cyberattacks and ransomware resulting in weeks of outages and theft of proprietary and confidential data.

“Off-the-shelf” software provided by your IT company does not adequately protect you...because hackers can defeat it.

A Practice Will
Pay >\$100,000 to Recover

A Practice Will
Close for 5-14 days

Practices are Targeted by
Highly Sophisticated Attackers

Hackers Will Go Undetected
for Weeks or Months

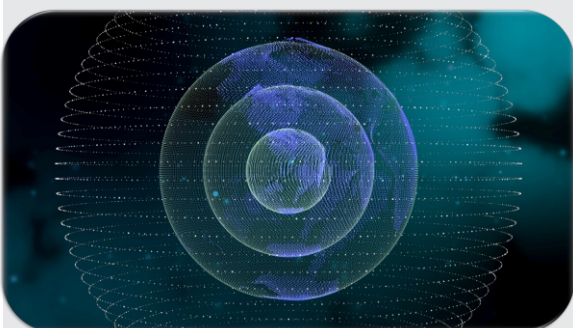

Anti-Virus Software Does
Not Prevent Ransomware

Your Practice is Being
Targeted by Hackers

Black Talon Defender provides a multi-layered approach to cybersecurity by utilizing highly trained and credentialed security experts to identify vulnerabilities in your network that hackers use to steal your data and infect your computers with ransomware. Through vulnerability management, penetration testing, employee training, threat intelligence and endpoint detection, this multi-layered approach helps minimize the chances of an attack.

The Solution: Black Talon Defender

Hackers breach networks through vulnerabilities on your firewall, computers, printers, smart devices and Cloud technologies. Your team members present your organization with “click risk” because they are unable to identify the difference between a real email and a phishing email. Black Talon Defender implements solutions to identify risks and eliminate them while training your staff to make educated decisions.

Trust a Specialist

As a dedicated cybersecurity firm, our specialists live and breathe cybersecurity seven days a week. Our custom security solutions first identify where you have risk and then work with your organization to minimize or eliminate them. Just like there are specialists in healthcare, there are specialists in cybersecurity. Trust a specialist to keep you secure.

 **Vulnerability Management**

 **Cybersecurity Awareness Training**

 **Penetration Testing**

 **Cybersecurity Assessments**
