

Allograft

Resorbable Barrier Membrane

Pericardium

- Ideal barrier for GTR and GBR procedures
- Thin and flexible, yet strong enough to suture or tack
- Minimal memory - contours to ridge/graft site
- Primary closure recommended

Size	Item Code
1.0 x 1.0 cm	DP101
1.5 x 2.0 cm	DP152
2.0 x 3.0 cm	DP203

Fascia

- Excellent protection for GBR/GTR procedures
- Thicker than pericardium while maintaining flexibility
- Strong collagen - holds a suture/tack if desired
- Primary closure required

Size	Item Code
1.0 x 1.0 cm	DF101
1.5 x 2.0 cm	DF152
2.0 x 3.0 cm	DF203

Safety Assurance

Maxxeus Allograft Barrier Membranes are packaged freeze dried within a double sterile pouch. Each graft has a five year shelf life and is stored at ambient temperature. Grafts are prepared using a patented bioburden reduction process, and when combined with terminal irradiation, provides a Sterility Assurance Level of 10^{-6} . All donors are recovered and processed in the United States of America.
