

LOGICTM
MANDIBULAR DISTRACTION SYSTEM

Rethinking Possibilities, Reshaping Lives

The **Logic Mandibular Distraction System** is an intraoral bone distractor. It features various curved and straight bars activated with a threaded wire that has screw holes that are fixed to bone via 1.6mm or 2.0mm bone screws. The distractor is available in right and left versions. The threaded wire is activated by a hex driver and is capable of distraction lengths of up to 25mm.

- Low profile intra-oral device for use in cases where distraction osteogenesis is indicated
- Choice of three devices with fixed curvilinear trajectories that mimic the natural growth curve of the mandible
- Utilizes a patented flexible wire that provides access through soft tissue for ease of activation
- The activation wire can be cut during the consolidation period reducing the risk of infection while promoting soft tissue healing

Logic™ Distractors

216-0119 LOGIC™ Distractor, Straight Right

216-0118 LOGIC™ Distractor, Straight Left

216-0113 LOGIC™ Distractor, 36mm Right
