

Superior Quality Trephine Burs and Implant Drills

Manufactured in Japan • Available exclusively through Xemax

All drills and burs listed are manufactured from high grade stainless steel, and will hold their edge up to 3 times longer than conventional burs. All drills are ground, not milled, for better cutting efficiency. Implant drills each include adjustable stops, so that proper depth adjustment can be made. Compatible with any implant system. All drills, stops, and burs are autoclavable, and effective over multiple uses.
