Get greater insight

Get greater insight into how your students are really interacting with the resources you use in your teaching.

Explore new ways to build an active approach to teaching without changing your content. Get deeper insight into how individual students approach their learning journey.

With Talis Elevate you can:

- Build activity directly into content by incorporating discussion, debate, questioning and peer review directly into your resources across multiple content types.
- Share a consistent experience across a variety of content types with a unified interface, analytics, discussion and private note taking capabilities.
- Build a range of activities into your teaching.
- Gain insight into resource usage and see how the cohort is using your resources.
- Remove barriers to entry for your less confident students, enabling them to participate in discussions anonymously.
- Do this directly from within your LMS. You don't need to change the way you build resources into your learning design approach.

"Talis Elevate proved a really effective means of engaging students with weekly readings in preparation for class. It enabled me to get insights into elements of their work (independent reading) that I wouldn't normally be able to see. This meant that I could make in-class activities relevant to their interests, which, I think, increased engagement and interactivity in the classroom."

Dr Jamie Wood
Principal Lecturer in History in the School of History and Heritage and School Director of Learning and Teaching at the University of Lincoln

Learn how your resources are truly used

- Observe engagement of your entire cohort, or individual students with your content in a consistent way, regardless of content type.
- Advanced, granular analytics give you a new level of insight into student interaction, giving you greater insight into what works, what doesn't, and what needs to change.
- Improve your knowledge about an individual student's engagement across a module with easy to digest analytics, helping you identify potential retention issues early, and trends in learner behaviour.
- Gain new insight into students personal learning journey through discussion directly within resources, and our analytics dashboards.
- Talis Elevate bolts into your learning analytics systems for centralised analysis and investigation.

Share a consistent streamlined experience

- Our unified player keeps the look and feel the same, regardless of resource, to allow you to easily compare engagement across all resource types. You can apply annotations and add personal notes to media just like you can with documents.
- Talis Elevate works within your existing LMS. Add content directly to Elevate via your LMS, building into your current course design approach.

Build active learning directly into your content

- Putting discussion at the forefront of your resources.
- Use Talis Elevate for peer review, reflection, discussion, debate, and critique of content as students can engage collaboratively on core teaching materials.
- Students can also engage through anonymous commenting, giving them the confidence and ability to ask questions without concern or perceived bias.
- Develop a co-creation of knowledge approach to your teaching directly within your content.
- Students can take their own private notes on each shared resource as well as engaging in class based discussion, all in one place.

You don't need to change the way you teach

- It's easy to get started with Talis Elevate, start with a small number of resources and quickly scale up as you build it into your teaching approach.
- Designed with keeping things simple at the heart, Talis Elevate doesn't require a redesign of your resources, but enables you to build activity into this content for the first time.
