# PUBLISHING MONTHLY FROM JANUARY 2021

**nature**  
research

## *Nature Aging*

*Nature Aging's* mission is to provide a unique multi-disciplinary, unifying and highly visible publishing platform for the aging research community.

There is no other high-profile journal purely dedicated to aging research and that has a scope covering the whole spectrum of the field; *Nature Aging* will fill this gap. The journal is highly selective and yet broad in its coverage, publishing research from across the basic biology of aging, geriatrics and gerontology to the impact of aging on society.

Chief Editor: Sebastien Thuaud

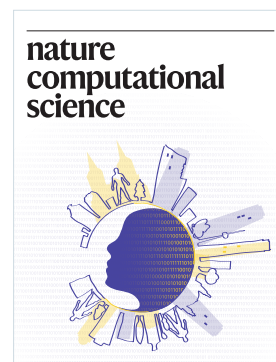

## *Nature Computational Science*

*Nature Computational Science* launches in response to increased interest and volume of literature about the connection between computer science (including scientific computing and data science), mathematics, and natural sciences.

The journal will publish across key themes of computational science, including, but not limited to cheminformatics, geoinformatics, computational models, materials science, and urban science.

Chief Editor: Fernando Chirigati

## *Nature Reviews Methods Primers*

*Nature Reviews Methods Primers* launches in response to increased interest in interdisciplinary research & reproducibility.

The journal will summarise primary research into accessible Primers that outline best practices for experimentation & data analysis across the life and physical sciences. Each Primer averages 20 pages and will be accompanied by an infographic that illustrates the method.

Chief Editor: Dominique Morneau
