

# KINGSTONSHELVES

## *Intelligent Shelving*

Our KingstonShelves are an automatic material return solution. They are a mobile unit equipped with RFID-enabled shelves onto which patrons place materials they are bringing back to the library.

# KingstonShelves

Our KingstonShelves are available in a three-shelf and four-shelf configuration, holding from approx. 120 books to over 200. Placed near your Library entrance and brightly coloured, they are easily noticed and a simple way for patrons to return materials which are then automatically checked in. Connection to your ILS is made directly through a SIP2 interface. Patrons literally just drop off materials and go. There is no need for them to scan their card. And the security chip is automatically switched on; if someone else picks up a returned item and tries to walk directly out, your security gates will sound.

IMAGINE OVER 50% OF CHECK-INS HANDLED BY KINGSTONSHelves. NOW IMAGINE OVER 25% OF THOSE BOOKS CHECKED BACK OUT SAME DAY!

KingstonShelves are a perfect fit for any Library, both downtown and rural branches. In any location they will help reduce time spent in the materials handling process and increase availability of popular material available. They are an affordable, convenient alternative to expensive AMH systems.

Each trolley works in conjunction with an Intelligent Information Terminal (IIT) which can support up to 12 shelves concurrently. When full, the trolley is unclocked from the IIT and can be rolled onto the floor, and an empty trolley clicked into place.

#### Capacity:

3-shelf trolley provides approx. 10.5 feet of RFID enabled shelving

4-shelf trolley provides approx. 14 feet of RFID enabled shelving

15" Touchscreen

Receipt Printer: optional for reserved items printing

Input Voltage: 100-240 V

Power Consumption: Max. 100w

RFID: ISO15693, 18000-3-1

RFID Models: Danish, KATVE, TechLogic, TV2, 3M, TRC, ITG, ITG2, ISO28560
