

STORMWA MANAGEMENT **SIMPLIFIED**

At the core of CloudCompli is a powerful stormwater management platform that translates inspections, corrective actions, and stormwater data into a systematic understanding through analytics, dashboards, and reports. This allows compliance directors to identify and prioritize action-items, investigate their sources, and improve the efficacy of their overall stormwater program.

Flexibility

CloudCompli was built to manage the diverse and ever-changing regulatory landscape nationwide. The software is able to be configured to follow the correct regulatory guidelines and match your workflows and forms

Accountability

- Visibility into entire MS4/NPDES compliance activities.
- Data analytics gives program managers the insight needed to ensure stormwater compliance

Usability

- User intuitive and simplified user experience.
- All device capability including offline access

Before

CloudCompli can help

Allows for digital data collection with any device, eliminates redundant tasks

One time data entry reduces inaccuracies

Deficiency and enforcement workflows

Allows Management to analyze and interpret data in real time.

Modular system allows for coverage across entire MS4 program

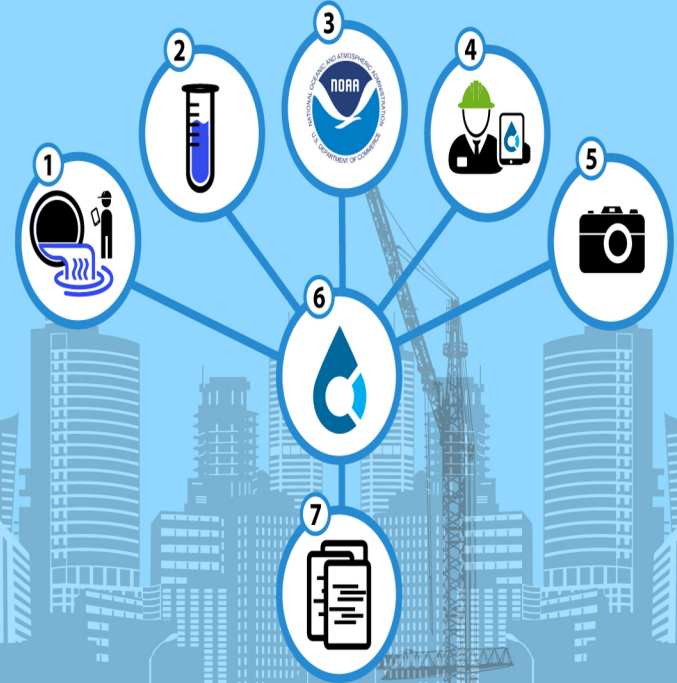

After

Benefits of Digitization

- Centralization and visibility
- Electronic and customizable inspections
- Reduce environmental impact
- Actionable Insights
- Ensure Compliance
- Annual reporting

Can provide the following values:

- Centralized dashboard to view all sites and action-items for full visibility
- Reduction in time spent on inspections and annual reports (users typically report 40-60% reduction)
- Leveraging data across all modules/programs to promote greater management and efficacy
- Analytics empowers your team with actionable insights to make informed decisions and manage compliance
