

CULVERT SOCK

An Effective Solution to Erosion

Culvert Socks are a great solution to cut back the amount of erosion of embankments. Used primarily to transmit water from the discharge end of a culvert to prevent soil erosion. Our easy to install culvert socks are suitable for concrete, plastic or steel piping and available in sizes to suit any pipe diameters and lengths.

BENEFITS:

- Budget friendly answer to hillside/mountain side erosion
- Disperse water to location of your choosing
- Fast install to control heavy runoff
- Great for steep inclines
- Wall connecting points available for long steep installs
- Great temporary solution until engineering can provide permanent solution
- Can be built in several colors to blend with environment
