

Equine Navicular Syndrome Clinical Trial

We are enrolling patients in a randomized, placebo-controlled clinical trial for horses with refractory navicular disease.

Study Specifics

We are enrolling client-owned horses in a study to determine the safety and effectiveness of an investigational veterinary product to control pain due to refractory navicular disease. Owners will be required to bring their horse to the study site for regularly scheduled visits over a 2-month time period. Owners will be required to record and report abnormal daily observations throughout the study.

Eligibility:

- Must be at least 2 years of age
- Lack of response to treatment of navicular disease OR owner considering neurectomy
- Unilateral or bilateral forelimb lameness of Grade 2, 3, or 4 (AAEP Lameness Scale)
- Radiographic evidence of degenerative changes

Funding:

This is a fully-funded study. At no cost to owner, qualified patients will receive

- Free veterinary consultation and exams
- Free investigational treatment procedure, including sedation and any required pain medications

If you have a patient that will be a good candidate for this study OR you are interested in participating as a clinical investigator, visit animalci.com/trigger05/ for complete details or contact us at ACI: 301.841.0014, ext. 714.

Thank you!
