

Chat live, schedule a Telehealth Visit for your client, or request a therapeutic imaging review.

The Portal for Collaborative Cancer Care is a free communication tool designed to provide you with immediate access to a board-certified radiation oncologist - when, where and how you need it. It is free and easily accessible to licensed veterinarians through any computer, tablet or mobile device. Our goal is to foster collaboration, break down barriers, and ensure that veterinary cancer patients get the best in comprehensive care, especially when multimodality treatment is warranted.

By making it easier to work together and collaborate across specialties, we believe that everybody involved in the care path will benefit – especially the patient.
