

# 3D Imaging Systems for Veterinarians

Truly mobile 3D CT imaging for companion animals

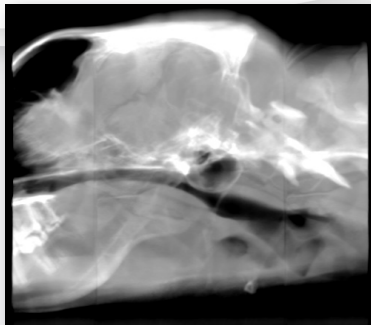

[xorantech.com/veterinary](http://xorantech.com/veterinary)

# Make the transition from 2D to 3D imaging

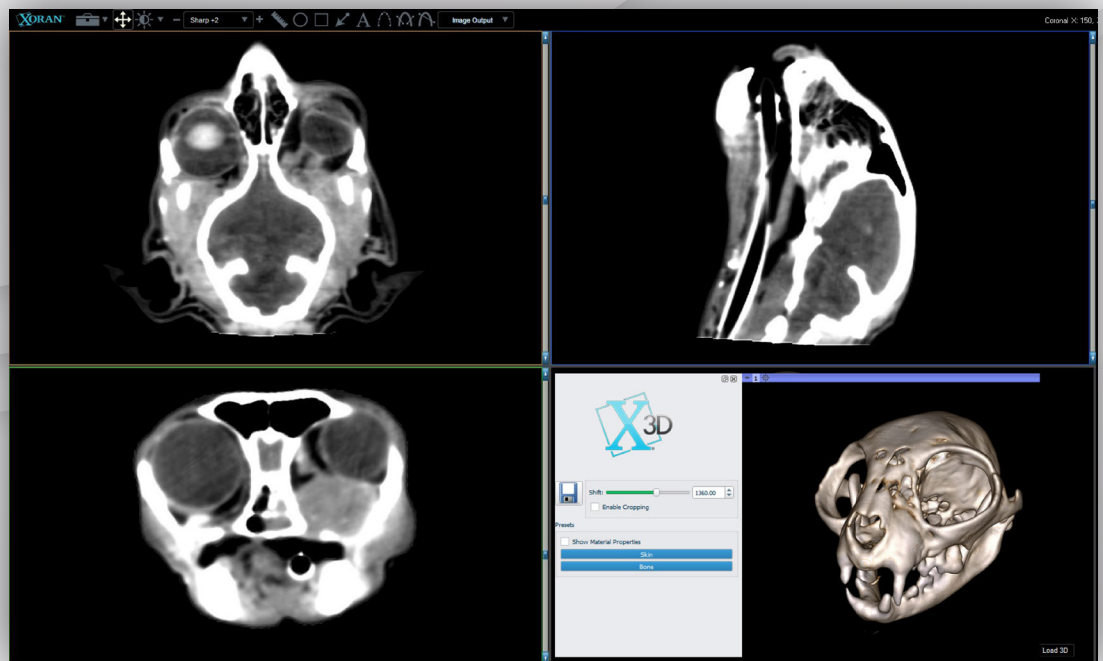

## 2D X-ray systems

2D X-ray projections provide limited data

## 3D imaging

Xoran's 3D CT systems allow you to see the entirety of your patient's anatomy from all angles, exposing pathologies that may be hidden in standard 2D X-rays

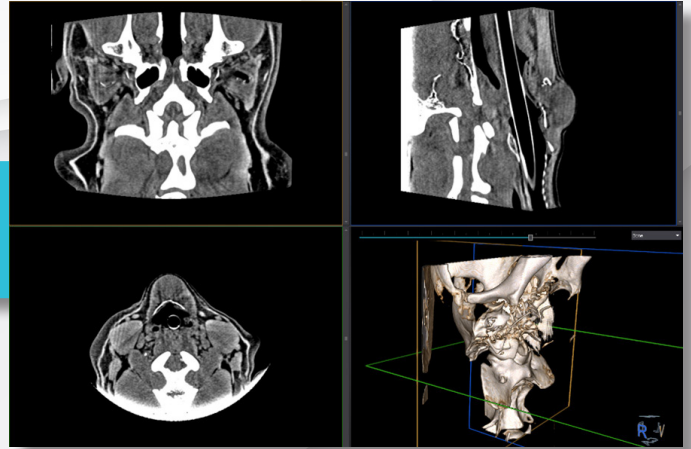

It's easy to make the  
move from 2D to 3D:  
you simply Roll, Scan, Diagnose.

# Form, fit, and function

Ultra-high resolution  
70 microns—industry-best

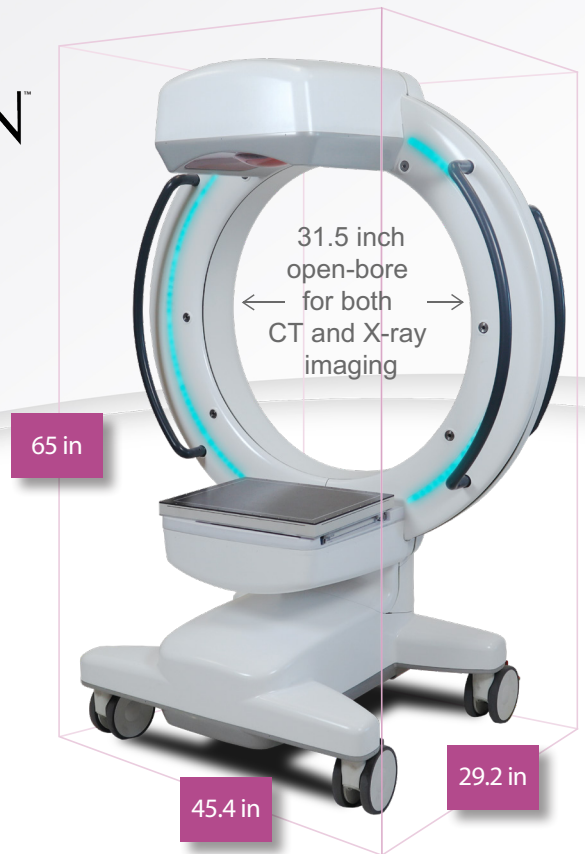

No dedicated room needed  
Rolls through standard door

Easy-to-use

VetCAT™

Revenue producer

Eliminate need to outsource CT

Minimize delays in diagnosis and treatment

Reduce risks from multiple anesthesia

Ease stress on patient and owner

# Which system is right for you?

Companion animal full-body imaging

All the imaging you need at your fingertips.

## What can you do with 3D mobile CT imaging?

Image your patient's pathology in real-time

Diagnose on the spot

Review scans immediately with pet parents to expedite approval

Plan and proceed with treatment

**VetCAT**

The VetCAT line are 3D head CT systems perfect for:

Dentistry

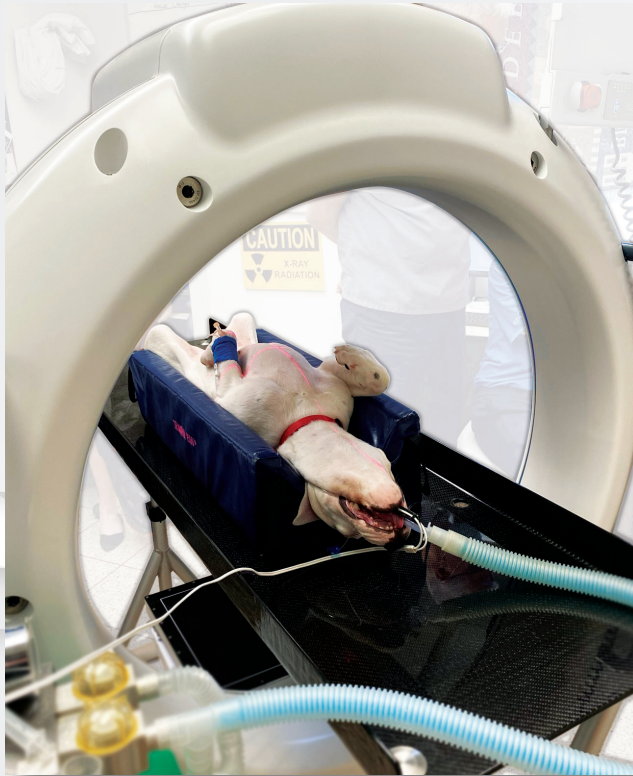

Dermatology

Exotics & Birds

Ophthalmology

Surgery

# Workflow...

Roll vTRON or VetCAT  
directly to patient

Roll

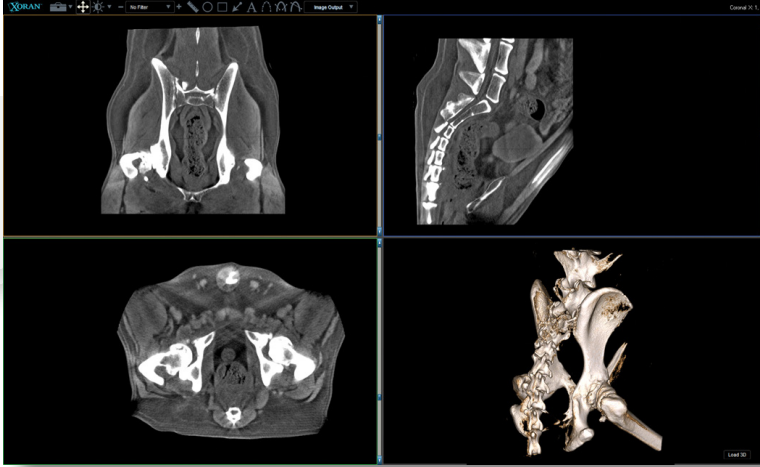

20-40 second scan  
Images ready right away

...t

Scan.

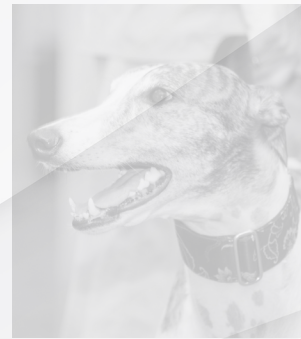

Diagnose.

Review 3D CT images  
Plan treatment
