Capture the complete patient story naturally and efficiently

Cloud-based HITRUST CSF-certified clinical speech recognition platform for documenting care in Veterinary Practice Management Software and beyond.

Doctors, not technology limitations, should dictate the patient story. With Nuance Dragon Medical One AI-powered speech recognition, users utilize their voice to navigate screens, dictate content and pull data directly into their notes.

Veterinarians spend less time creating documentation—anytime, anywhere—and more time with the patient.

Easy administration and helpful data

— **Easy to install and maintain.** True cloud-based architecture means no on-site servers or complex configurations; users can start dictating in less than 5 minutes. Automatic updates ease IT workload and limit veterinarian disruptions. Single sign-on and federated authentication enforces security while extending convenience.

— **Convenient administrator control**. A web-based portal allows administrators to manage licenses, deployments, and application default settings to easily create an efficient, familiar, predictable dictation experience for users. Improve application performance by sharing auto-texts, voice commands and vocabulary with user groups or sites.

— **Actionable insights.** Productivity reports provide usage analytics for insight on user activity, efficiency, sound quality, and time savings to help organizations identify opportunities to improve adoption and utilization.

A secure platform that speaks to everyone

— Empower quick and easy documentation through seamless integration with your existing Veterinary Practice Management Software.

— Boost Veterinarian productivity with fast, accurate, and responsive dictation.

— Extend portability with cloud-based speech recognition and a secure wireless microphone app.

— Achieve faster reimbursement with more complete narratives.

— Monitor usage and make informed decisions to further the value of your investment.

Dragon Medical One is all about portability, personalization, access, and compatibility

— **Single voice profile.** Designed for speed, accuracy, and flexibility, Dragon Medical One achieves 99% accuracy from the start with no voice profile training. Cloud-based clinical speech recognition and a single voice profile deliver personalized vocabularies and templates for a familiar, consistent experience across clinical workflows, care settings, apps and the widest range of devices in the industry.

— **Portable convenience.** PowerMic Mobile turns any workstation into a dictation station and gives veterinarians the freedom to document notes using their smartphone as a secure wireless microphone.

— **Built-in productivity tools.** Voice commands limit manual clicking by automating key presses, turning the microphone on and off, and inserting documentation templates or frequently-used text content.

Healthcare security and compliance

Dragon Medical One and its hosting infrastructure, Microsoft Azure, are certified by the Health Information Trust Alliance (HITRUST) as meeting the HITRUST Common Security Framework (CSF), a set of industry-defined, risk- and compliance-based security standards and controls tailored to the healthcare industry to ensure end-to-end security and uptime guarantees.

About 1st-Dragon/CME

The origins of 1st-Dragon/CME began during the 1990s when we started working with earlier versions of voice recognition software. As the development of EHR/EMRs appeared on the market, we focused our efforts on customizing Dragon Medical to compliment the workflow of each provider based on their utilization of the EHR/EMR. Today, we are a trusted Nuance Platinum Partner with more than 24 years of experience helping thousands of healthcare organizations enhance their workflow using Dragon Medical. We have evolved into an organization with the experience to work with and support all practice sizes. We specialize in offering our clients a customized approach which is designed specifically for their clinical workflow.
