

A small volume enteral feeding pump to grow with.

The Infinity Orange's unique safety features and simple user interface make it ideal for use in the NICU, and provides familiarity and portability as patients transition to their homes.

Designed for Safety in the NICU

The Infinity Orange combines an easy-to-use interface with several unique programming features to make programming simpler and safer.

Users are able to select whether they are delivering formula or human milk. The pump automatically calibrates the air-in-line sensor sensitivity based on what food type setting is chosen.

A feeding confirmation feature ensures that all feeding parameters (food type, dose, & rate) are set and reviewed before the pump can operate.

Integrated safety in all delivery sets

Both the pump and delivery sets are colored orange, and all delivery sets feature an ENFit® connector to further reduce the potential of misconnection.

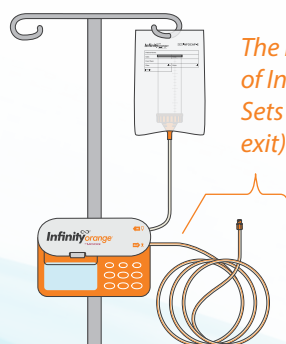

All Infinity Orange delivery sets include a patented in-line occluder for free-flow protection. ▶

◀ Infinity Orange delivery set with ENFit connector

Minimize Waste, Maximize Efficiency

Unlike most enteral feeding pumps used in the NICU, the Infinity Orange features small-bore tubing in its delivery sets, minimizing the amount of wasted mothers' milk or formula during a feeding.

The residual (or waste) volume of Infinity Orange Delivery Sets (from cassette to tubing exit) is only ~1.5 mL.

Standard diameter enteral feeding sets typically have between 12 - 15 mL residual volume.

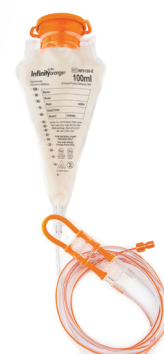

Infinity Orange Screw Cap Delivery Set

This unique delivery set makes feeding preparation quick and convenient. Simply pump milk directly into any container or bottle with a 40 mm opening. The bottle can then be used as a standard baby bottle, or can be used for pump feeding by connecting the screw cap lid with pre-attached pump set, then inverting and placing in the holding bag.

Infinity Orange 100 mL Delivery Set

The small and conical design of the 100 mL delivery set make it ideal for accurately delivering enteral feeds in the NICU while minimizing wasted milk or formula.

Lower Cost of Ownership

With a lower initial capital purchase cost, the Infinity Orange presents a cost savings opportunity when compared to more complex and expensive syringe pumps that are often used for basic enteral feeding use.

When compared to other standard enteral pumps used in the NICU, the Infinity Orange reduces cost by eliminating the need to perform annual maintenance, reduces wasted milk or formula, and is much easier to use.

- ✓ Lower capital cost vs. syringe pumps
- ✓ No regularly scheduled maintenance
- ✓ No calibration required
- ✓ Dedicated enteral feeding solution
- ✓ Performs consistently under a variety of conditions

Grows with the Patient

As patients grow, parents and caregivers can use the same familiar and proven platform at home that they used in the hospital.

The Infinity Orange can be used at home as long as needed. And when appropriate, patients can move to the award winning Infinity Enteral Feeding Pump.

Both the Infinity Orange and Infinity feeding pumps feature similar user interfaces and both are designed for maximum safety, usability, and portability.

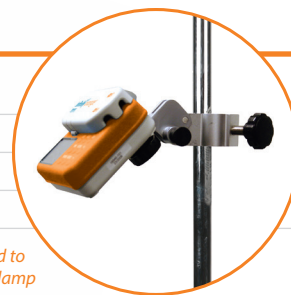

24x7 Clinical & Customer Support

Speak live with a Moog Clinical Representative for pump questions and troubleshooting guidance 24 hours per day, 7 days per week. Our Customer Support Team is also available Monday through Friday, 7:00 AM - 5:00 PM (Mountain Time) for customer service assistance such as product line questions, orders, complaints, and RMA support. Call **800.970.2337** for live clinical or customer support.

- ✓ Live stream video training
- ✓ Self paced e-learning
- ✓ On-site education
- ✓ Online training materials including videos, downloads, FAQs, and an interactive tour of the Infinity pump

Order No.	Units / Box	Description
