

CommonWell and CareTend: Improving care coordination and health outcomes

WellSky interoperability connects leading network providers to enable better care coordination

WellSky is excited to announce CareTend's new integration with CommonWell/Carequality, giving home infusion and specialty pharmacy providers a simple way to unify patient medical information across care settings.

What is CommonWell Health Alliance?

CommonWell is a not-for-profit trade association that is dedicated to creating universal access to health data via a person-centered, nationwide network. CommonWell has a growing network with over 26,000 provider sites and more than 144 million individuals enrolled. Participating providers have retrieved over 1.7 billion health records since launched. WellSky joined CommonWell in 2019 to ensure health data becomes more easily accessible, regardless of care setting, so providers have the critical information they need to achieve better outcomes for the people they serve.

What are the benefits of integrating with CommonWell?

- Gives the user access to patient information in seconds without the need for intervention by the provider.
- Contributes relevant patient information from your pharmacy to the patients' other care providers to view within CommonWell.
- Reduces the need to request clinical information to be sent by other means, like email or fax.

How does this integration work with CareTend?

CareTend connects to CommonWell through WellSky's interoperability services, which provide clients with connections to local, regional, and national patient data exchanges. This enables CareTend users to easily enroll patients into the CommonWell network where they can search and contribute information on patient care.

The integration supports the following clinical workflows within CareTend:

- The WellSky CommonWell patient match/registration workflows are embedded within CareTend to allow launching, viewing, and/or updating patient registration and match status to the CommonWell directory.
- Develop access to the patient document viewer within CPR+ to view the list of returned documents and allow viewing selected documents.
- Designation of document type which will be contributed to CommonWell, and the system will contribute those designated documents to the CommonWell network.

Our vision is simple: provide our clients with enhanced data exchange capabilities, improve care coordination, and achieve better health outcomes, ensuring a more efficient patient experience.

To learn how your organization can sign up for the WellSky CommonWell integration, contact your WellSky representative.
