If you have lost a child to a sudden unexpected death:

We would like to express our deepest condolences to you and your family during this time. We understand what a confusing and tragic time this is for you and want to help.

If you would like to learn more about the resources available to you, including the SUDCRRC, please contact us by:

Phone: Calling SUDC at 800-620-SUDC (7832)

Email: Email SUDC Director, Laura Crandall, at laura@sudc.org

Web: Go to SUDC.org and click on the orange "Bereaved Families" button.

If you are a professional...

and would like to refer a family or learn more about the SUDC Registry and Research Collaborative, please contact the SUDC Director, Laura Crandall, by:

Telephone at 800-620-SUDC (7832)

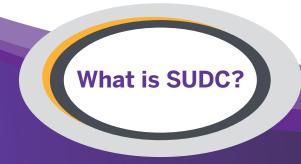

Email to laura@sudc.org

SUDC is defined as the sudden death of a child greater than 1 year of age that remains unexplained after a thorough case investigation, including performance of a complete autopsy, examination of the death scene, and review of the child's medical history. (Krous et al. 2005)

Striving to Understand and Prevent Sudden Unexplained Death in Childhood

How often does SUDC occur?

According to the Center for Disease Control (CDC), approximately 216 children between the ages of 1 and 4 years, 38 children between the ages of 5 and 9 years, 35 children between the ages of 10 and 14 years, and 104 children between the ages of 15 and 19 were affected by sudden unexplained death in 2015. The incidence of SUDC in toddlers is about 1.4 per 100,000 children. This rarity makes research difficult.*

About the Registry

The SUDC Registry and Research Collaborative is now available to assist families and the medicolegal death investigation community when these tragedies occur. Before you make your decision to participate in the SUDC Registry and Research Collaborative, however, you will need to know what the study is about, the possible risks and benefits, and what your participation would involve. You may also decide to discuss the study with your family, friends or doctor before making a decision. Please take your time to make your decision and please be sure to ask the study investigators any questions that you may have.

The Purpose of the SUDC Registry and Research Collaborative is...

The purpose is to increase the understanding of the characteristics, circumstances surrounding death, medical histories and pathologies of children from ages 11 months through 18 years who have died suddenly and unexpectedly, and in some instances, without explanation.

The SUDC Registry and Research Collaborative will analyze cases of sudden unexpected deaths in children to understand risk factors and causes, and develop preventative measures. By bringing together these rare cases, we hope to support grieving families with a greater understanding of their child's death and support medical research efforts into all causes of Sudden Unexplained Death in Childhood.

The SUDC Registry and Research Collaborative will...

- **Review the child's death**, medical and family history by our study pathologists (including forensic, pediatric, cardiac and neuropathologists) to determine whether a possible, probable or definite cause of death can be identified and whether additional studies would be helpful in determining a specific cause of death
- For case investigations that are open/active, the registry offers **neuroimaging and neuropathology consultation**
- For those cases confirmed to be unexplained after review access to **genetic analysis** (whole exome sequencing) when viable samples are available. Additional genetic analysis opportunities for biological parents and some family members.
- Study the risks that lead to sudden unexplained death in childhood (SUDC)
- Provide families with a review of their child's death through a **study report**
- **Identify at-risk individuals** with the hopes of gaining knowledge to establish prevention strategies to reduce the chances of sudden unexplained death in the future.

Participation Requirements include...

Participants must be a parent or guardian of a child from 11 months through 18 years of age who has died suddenly and unexpectedly where the cause is unknown or unclear, and where an investigation has occurred.

The SUDCRRC Members

Principal Investigator:

Orrin Devinsky, MD, Neurology

NYU Langone Health, NY, NY:

Frank Cecchin, MD, Pediatric Cardiology
Laura Crandall, MA, SUDC/Neurology
Daniel Friedman, MD, Neurology
Mikhail Kazachkov, MD, Ped Pulmonology
Heather A. Lau, MD, Metabolic/Genetics
Dominique Leitner, PhD, Neuroscience
Jennifer Lighter, MD, Infectious Disease
Cynthia Loomis, MD, PhD, Histopathology
John Pappas, MD, Genetics
Colin Phoon, MD, Pediatric Cardiology
Rachel Rabin, MS, CGC Genetics
Timothy Shepherd, MD, PhD, Neuroradiology
Matija Snuderl, MD, Neuropathology
Christopher William, MD, PhD, Neuropathology
Thomas Wisniewski, MD, Neurology

Mayo Clinic, Rochester, MN:

Michael Ackerman, MD, PhD, Pediatric Cardiology Peter Lin, MD, Forensic Pathology Joseph Maleszewski, MD, Cardiac Pathology Ross Reichard, MD, FP/Neuropathology

Columbia University Medical Center, NY, NY:

David Goldstein, PhD, Genetics Dale Hesdorffer, PhD, Neuroepidemiologist

Additional Forensic Pathology Collaborators

Tom Andrew, MD
Jamie Downs, MD
Heather Jarrel, MD
Kristen Landi, MD
Kelly Lear, MD
Katherine Maloney, MD
Keith Pinckard, MD, PhD
Kristin Roman, MD
Kristen Landi, MD
Kathryn Pinneri, MD

Additional Neuropathology Collaborators:

Inma Cobos, MD, PhD
