

smart. safe. dry.

The world's most advanced predictive solution designed to stop bedwetting for good.

*"GOGO Band has been life-changing, and our child's improvement has been way beyond my expectations!"*

*– parent of 13 year-old boy*

# the world's most advanced solution for bedwetting

GOGO Band combines revolutionary advances in biometric wearable technology and AI machine learning analytics to bring the treatment of PE into the 21st Century.

## predictive

Alerts children to the presence of their "bladder full" signal before they have accidents.

## intelligent

Our system automatically deploys and refines a personalized predictive model for a child every night. The more a child uses the GOGO Band System, the more accurate the alarm predictions become.

## drug-free

Our system is non-invasive using only a child's natural biometrics and requires no drug therapy.

## connected

Parents are involved every step of the way with the GOGO Band App, while children are empowered with technology to help themselves.

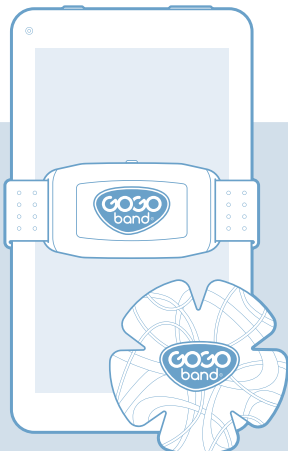

## effective

Most children will see initial results in 2 to 4 weeks, with life-changing progress in 3 to 6 months.
