

# HEALTH EQUITY SUPPORT

---

**CHADIS supports health equity through multilingual assessments, access to services through an easy-to-use referral module, and reports to assist with the interpretation of patient data.**

# Improving Health Equity with the Power of Data

**CHADIS offers 100's of screens and assessments and can help transform your raw data into actionable insights:**

- An assortment of Social Determinants of Health screens identify barriers to maintaining good health and accessing care.
- Many assessments are multilingual for the patient.
- Some assessments minimize literacy challenges with the use of pictures along with the text.
- Data reports are available to reveal the needs of your patient population so you can provide resources and referrals.

# 100's of Child and Adult Questionnaires and Tools for the Whole Family

- Social Determinants of Health
- EPSDT Questionnaires
- Private portal for teens
- Visit Priorities or Chief Concern
- General Health Questionnaires
- Behavioral Health Questionnaires
- Developmental and Autism Questionnaires
- Child and adult questionnaires in various languages

# Chronic Care Module for Family Stress

## Family Stress Care (SDOH)

The Family Stress module helps busy clinicians address the “social determinants of health” – particularly those family risk factors known to be antecedents of child maltreatment, delayed development, behavior problems, and a wide variety of chronic health conditions in adulthood.

# Patient Education /Electronic Handouts

- "Developmental prescriptions" created based on the child's milestones
- Tailored safety guidance
- Anxiety-related resources
- CHADIS Care Portal can provide personalized treatment plans (e.g. Asthma Action Plan; ADHD goal-related messages) that can be updated remotely by the clinician.
