

About Mesh AI

Founded in 2014, Mesh AI is an automated staff scheduling system built with the sole mission of improving the lives of healthcare workers.

Mesh AI has since served thousands of clinicians across Canada, the United States, and Australia. With roots in academia, the system has been built upon the experiences of working closely with medical specialties like pediatrics, resulting in a highly customizable system built uniquely for each new team.

AUTOSCHEDULING

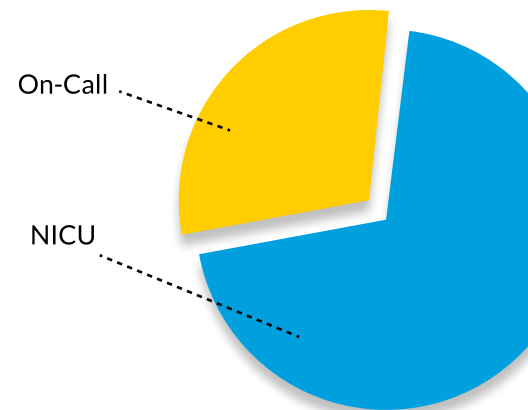

Create staff schedules with a single click.

Reduce the admin overheads related to time-consuming shift and call planning.

ANALYTICS

Always ensure shift equality and fairness

Avoid feelings of inequality and favoritism among clinicians while creating a more inclusive and satisfied work environment.

RECOMMENDATION ENGINE

Choose the right person for every shift

Eliminate costly errors, fatigue, and stress due to poor work planning.
