

Free your practice from complex integrations, fax errors, and other workflow delays. Transmit referrals, patient results and reports, insurance cards, or any other clinical information across any platform—in one click.

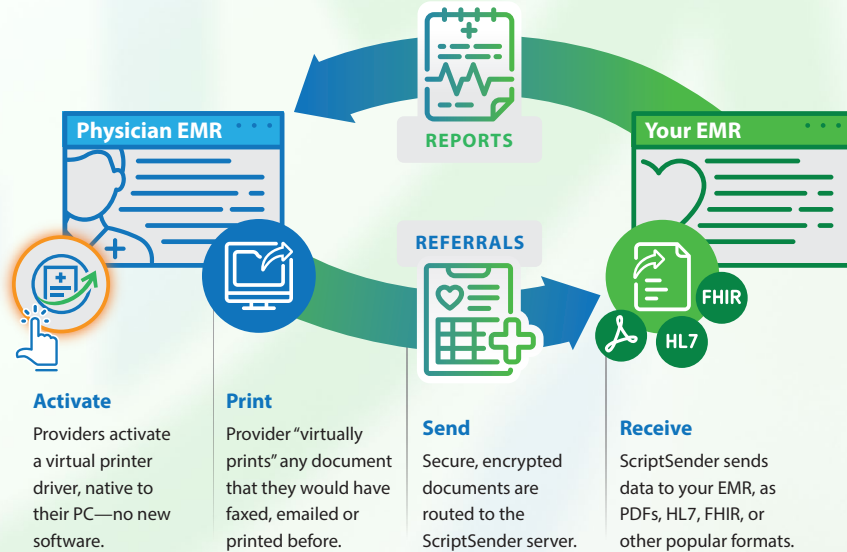

## Features

- + Referrals from any system with one click
- + Results to any system with one click
- + Light-weight, web-based image viewer for clinical review
- + Streamlined, automated prior authorization processes
- + Real-time patient engagement for scheduling to improve referral retention
- + Automation of CDS workflows for easier compliance
- + Customizable web referrals
- + Embedded links in reports to images or other medical data
- + Integrate with your referring physicians in seconds
- + Support for custom business rules
- + Real-time notifications and full audit trail for all referrals and reports
- + HL7 supported but not required

## Benefits

- + Drastically reduces turnaround times
- + No installs, downloads or costs to your referring physicians
- + Increases potential for referrals
- + Eliminates VPN and HL7 integration costs
- + Streamlines order workflow
- + Supports greater continuity of care

## How it works:

## Easy for your referring physicians to transfer documents:

Your referring providers use a virtual printer, activated with a simple point-and-click in a web browser, to transmit to your **ScriptSender** server. It's as simple as a print command—and that's any document, from any medical group, using any EMR. **ScriptSender** leverages a driver native to Microsoft Windows—no installs, downloads or costs to your customer.

## Easy to integrate those documents into your system:

Routing to your **ScriptSender** server is secure, using industry-standard encryption technologies. Any type of document—clinical referrals, lab results, scanned insurance cards, and so on—is written to a pristine PDF upon receipt. Want to take it further? Additional **ScriptSender** options include order generation into your EMR and HL7 file generation for import.

# Want to optimize further?

Discover the full ScriptSender solution suite:

## ScriptSender

Enable referrers to send any document, from any application and any medical group, directly to your practice in one click.

## IVIS—Image View Image Share

Provide secure access to images and reports—on any device, any platform, anytime.

## ReportSender

Strengthen provider relationships with instant report delivery and real-time notifications.

## Translation Services

Instantly translate any file to any format, plus auto-creation of HL7 files and auto-writing of referrals directly to an EMR.

## Web Orders

Streamline the referral workflow with custom web referrals from any system.

## DICOMSender

Simplify the transfer of overreads, second opinions, patient CDs—any outside study—into your system with an easy, wizard-driven solution.

## Intelligibility

Increase collections with robust, comprehensive data on insurance eligibility and patient responsibility—in real-time.

## SMRT

Deliver medical dictionary definitions of terms in imaging reports to increase readability and clinical usefulness for referrers.

ScriptSender enables secure, instant communication with your referring providers—no installs, no downloads, no complex interfaces.

**This is integration made easy.**
