Black Creek

INTEGRATED SYSTEMS CORP.

S•M•A•RT Corrections & Public Safety Solutions

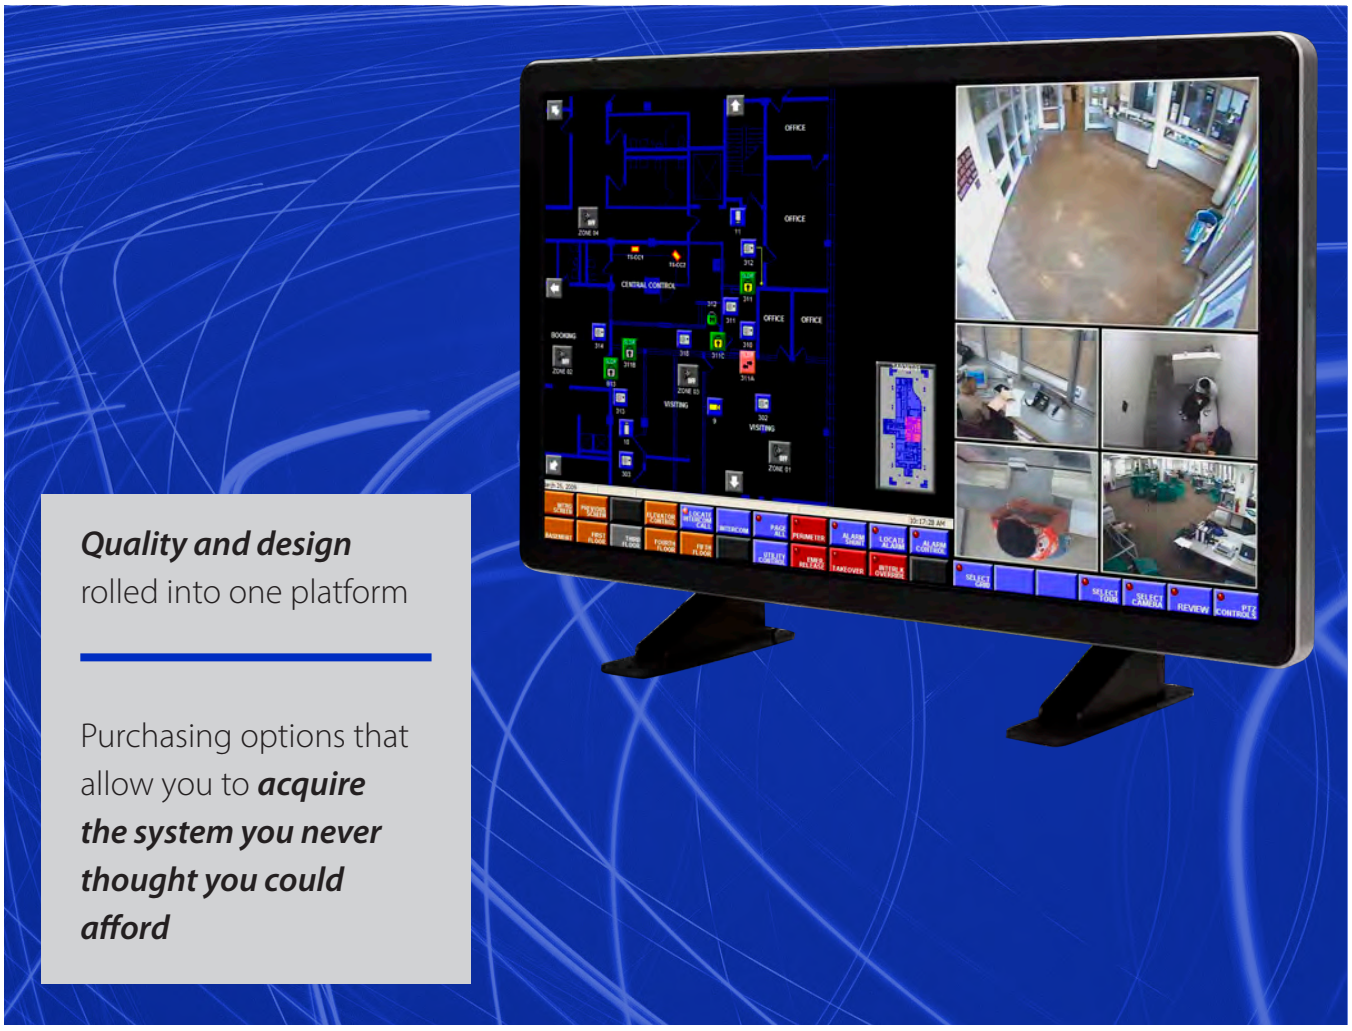
Super Display® Touchscreen

Simple Solutions for Complex Corrections

NOT YOUR AVERAGE CONTROL PANEL

Black Creek's flagship correctional solution, the ***Super Display®*** Touchscreen system, uses a single 32" LCD display to consolidate control functions and video display for efficiency of operation, and can significantly reduce staffing requirements. Ideal for either new construction or retrofits of an existing facility. It is the most cost-effective, long-term solution available.

Get rid of the clutter in your central control location. Our system eliminates the need for multiple monitors by consolidating all monitoring and control functions into one high-quality, extra-large LCD touchscreen. By simplifying your monitoring system, we are expanding your security capabilities.



Quality and design rolled into one platform

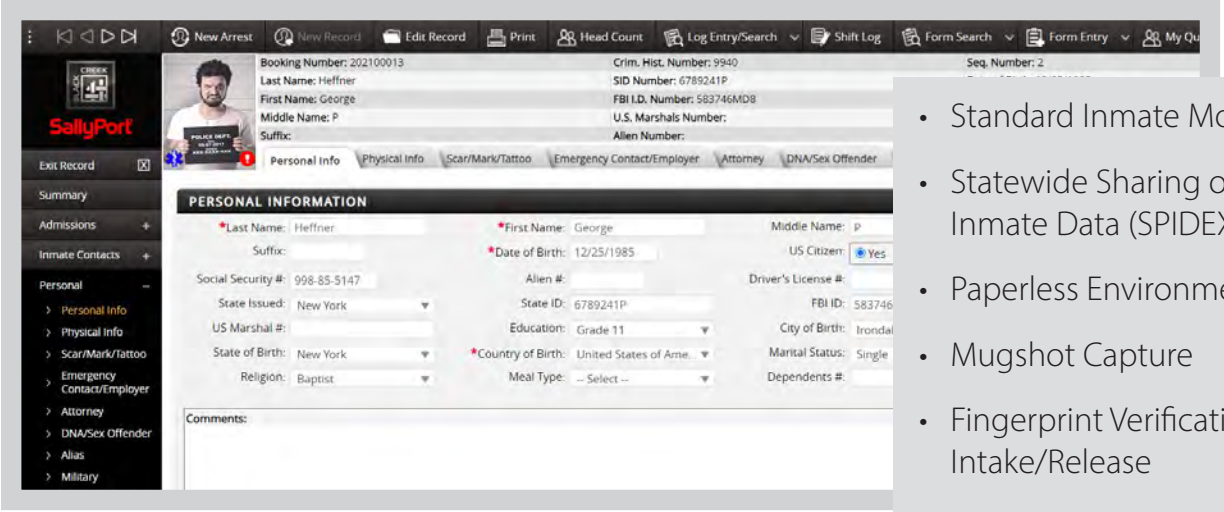
Security • Management • Accountability • Real-Time

SallyPort© 4.0

Jail Management System (JMS)



- Standard Inmate Modules
- Statewide Sharing of Inmate Data (SPIDEX)
- Paperless Environment
- Mugshot Capture
- Fingerprint Verification for Intake/Release
- Custom Reporting
- Electronic Shift Log

CHANGING JMS EXPECTATIONS

SallyPort©'s simplicity and ease of use makes the process of booking and detention as fast and as easy as possible. ***SallyPort***© works seamlessly with records management systems and other third-party applications, promoting information sharing and automating many of the booking and record-keeping tasks of any size detention facility.

State Specific Requirements:

SallyPort© is a state-specific application that meets the requirements for reporting, jail time calculation, and data collection required by each individual state. This allows the application to capture the data needed by your agency for your state, rather than forcing another state's requirements on your data collection. All state and federal reporting requirements are included with the application. Because state requirements vary from state to state, ***SallyPort***© is a configurable application that can tailored for each agency's needs.

Statistics and Analytics Module: (Release 2022)

SallyPort© is currently developing a Statistics and Analytics Module that will contain standard analytical models and reports used for correctional facilities. Agencies will be able to develop custom displays using third-party applications integrated into ***SallyPort***©.

User's Groups:

SallyPort©'s Annual User's Group Conferences allow the staff using the application to have input on future upgrades and functionality. Upgrades to the application are included in the Annual Support so you are always using the latest version without the need for costly upgrades.

Watch Tour®

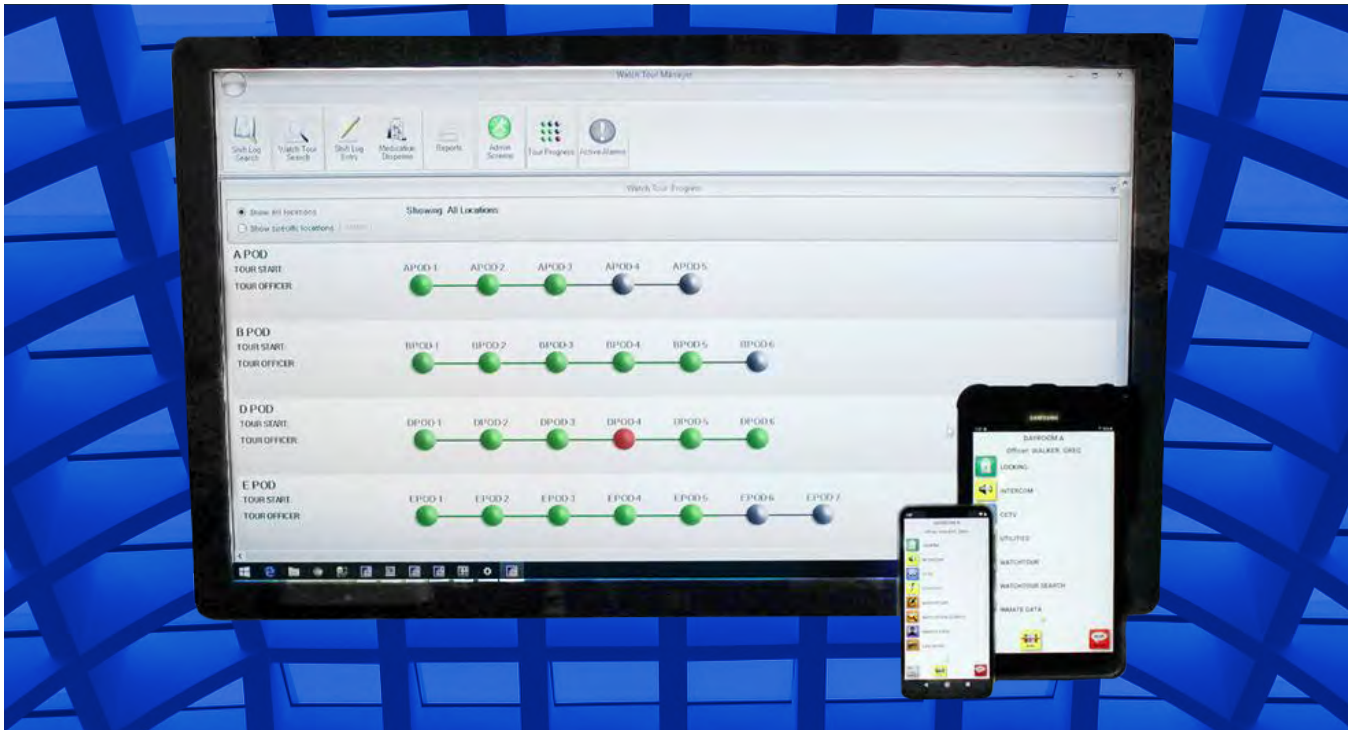
Enhanced Safety & Accountability

GET YOUR PEACE OF MIND BACK

There is nothing more frustrating for detention managers than to learn after an incident that watch tours were not being conducted in compliance with established policy, or worse, were not being conducted at all. With Black Creek's ***Watch Tour®*** system, facility administration can rest easy knowing that tours are being conducted on a timely and consistent basis via real-time notifications.

When used in conjunction with our Real-Time Location System (RTLS), your situational awareness within your facility will expand exponentially. Our ***Watch Tour®*** and RTLS systems will change the way in which you carry out daily operations by increasing efficiency, reducing costs, and focusing on the safety of your staff and inmates.

- ***Real-time*** indication of tour progress
- ***Configurable*** scheduling & notifications
- ***Alerts*** for late or missed tours
- ***Integration*** with Security System and SallyPort© JMS



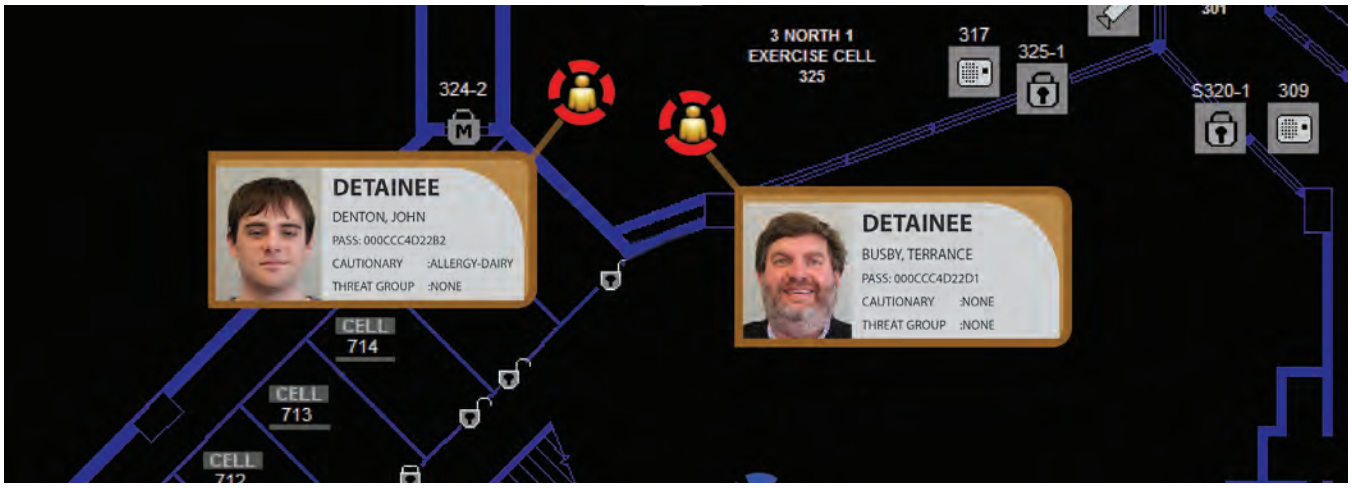
TSI PRISM™ Gen 5

Real Time Locating System

CONTINUOUS TRACKING & POSITIONING

At half the price of previous generations, ***TSI PRISM's Gen 5 RTLS*** provides an affordable, reliable and highly precise solution for protecting and tracking people and assets in a corrections environment. TSI PRISM's feature-rich RTLS technology will make your facility safer, improve your operational efficiency, and reduce your agency's exposure to costly lawsuits.

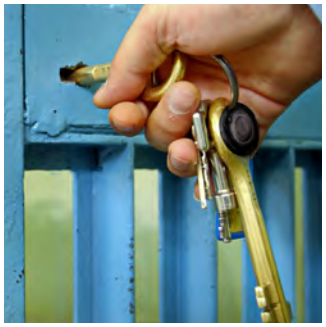
- Available tracking accuracy < 1 meter
- Battery life up to 5 years
- Feature-rich, web-based application software
- Instantaneous subject location
- Detailed tracking histories
- Heart Rate Monitoring for compliance



Detainee tag with heart rate monitoring

Officer tag with man down and duress functions

Visitor tag with duress function



Asset tracking tag for protection of valuable and hazardous property and keys

PASS-5B Detainee Tag

Detainee Well-Being Monitoring System

IMPROVE MONITORING WITH FEWER STAFF

Detainees wear wrist-mounted, tamper-resistant transmitting units that send a unique radio signal on a user-configurable interval. Signals are transmitted to specialized receivers mounted in detainee housing areas which are forwarded over a dedicated Ethernet network to an application server for processing. The ***PASS-5B Detainee Tag*** incorporates an accelerometer for measuring detainee physical activity level and a biometric sensor for measuring detainee heart rate.

- ***Configurable alarm thresholds*** include activity level and heart rate
- ***Proximity alarms*** based on user-configurable detainee classifications (e.g. Covid-Positive)
- ***Alarm annunciations*** include detainee's zone location in the facility

SYSTEM ELEMENTS:

- PASS-5B Detainee Tag - Designed for the uncooperative wearer. Resists body oils, soaps, and lotions. Constructed of hypo-allergenic materials.
- LR-5B Receiver - Serves as point of reception for signals transmitted by TSI PRISM™ PASS-5B tags.
- Application Server - Aggregates tag data from LR-5B Receivers. Calculates location of tag zone in facility.
- Enrollment/Monitoring Workstation - Executes TSI PRISM™ Client Application. Includes signature capture pad and laser report printer.

Black Creek

More Than Just Another Security Integrator

BUILDING A LEGACY

Black Creek was founded as a sole proprietorship in 1978 and incorporated in the State of Alabama in April of 1989. Black Creek recognized the potential of computer technology and quickly began the development of our touchscreen-based security system. As a result, Black Creek was the first to develop and successfully implement touchscreen security control technology into a correctional setting. Due to our leadership, experience and reputation in the corrections industry, Black Creek technology has become a standard not only for many correctional agencies, but also for many architectural and engineering firms specializing in criminal justice.

Black Creek does not manufacture fire alarms or door locks as some of our competitors do, nor do we provide services or solutions for commercial or retail applications. Our singular focus and commitment to the correctional industry is evident by our continued research and development of products as well as our ability to forge lasting relationships with our customers. Our vast industry experience and resources enable us to properly assess an agency's needs and provide solutions which meet or exceed their expectations. Black Creek works closely with our user agencies to develop solutions for correctional professionals, by correctional professionals. We understand the "how" and "why" of corrections operations, and we have developed both long and short term solutions to accommodate.
