Key management

We find physical keys at the core of every business, for controlling access to facilities, fleet vehicles and sensitive equipment. When you can control, monitor and measure your company's key use, your valuable assets are more secure than ever before.

Traka's lineup of key cabinets are modular and scalable to meet the needs of any business, providing controlled key access for authorized users only. All activity is recorded by the system, generating a complete audit trail for better visibility and accountability over the use of sensitive keys.

Keys are secured to our industry-leading Traka iFob™, a nickel-plated brass tube which locks keys in place and uniquely identifies them to the system.

User authentication options

Network or standalone

Extension cabinet options

L-TOUCH (up to 180 keys)

S-TOUCH (up to 60 keys)

M-TOUCH (up to 20 keys)

V-SERIES (up to 5 keys)

Robust steel construction supports increased security, and heavy-use processes

Ultra-responsive, intuitive touchscreen interface delivers faster interactions, process completion, and reporting

Flexible, multi-factor authentication options integrate with existing access control policies and tokens

Configurable door options; lock or non-lock, solid steel or clear doors, align with the security levels and access needs

Scalable key capacity can grow with business needs and adapt to new procedures and policies

Equipment management

Your organization's assets are critical to its success, and should be managed to maximize their effectiveness. Traka locker solutions provide centralized control over your important items, allowing you to determine who has access, and when.

With options like integrated device charging and RFID asset identification, Traka lockers help ensure that your equipment is available to meet the day-to-day needs of your business.

Whether you need simple, temporary storage for a single facility, or enterprise-level control over thousands of devices around the globe, Traka builds a locker solution to suit the needs of your organization.

Integrated device charging

AND MORE

Administrative control

TrakaWEB is a browser-based administration suite for centrally managing Traka Touch key and locker systems from any authorized device on your network, anywhere in the world.

It enables you to easily manage users and items from central or distributed locations, and can easily integrate with an existing database to automatically enroll users, credentials and access permissions.

Every user and asset transaction is recorded, holding users fully accountable while providing valuable data on the usage of your keys and devices. With TrakaWEB, you will enforce accountability, improve utilization and maximize the effectiveness of your assets.
