

Correctional TV Channel Creation & Programming Management

Create a correctional facility-friendly, TV channel lineup, or enhance your existing cable TV channels with helpful new features.

Enhancing your TV channels and programming can help manage inmate behavior, keep prisoners occupied, relieve stress, assist supervision, and minimize incidents.

The FlexStream MX-400 enables prison staff to create custom TV channels, and manage the content of those channels, with an easy to use, web calendar user interface.

Whether adding channels, or providing a new channel lineup, the MX-400 has tools you need to entertain, educate, and occupy inmates, broadcast alerts and other time sensitive information, and control access to programming content using existing DTVs and cable TV wiring.

Better prisoner programming, education, entertainment & information on your TVs.

Broadcasting a channel lineup that includes movies, religious services, educational content, music channels, health & fitness information, and general inmate information can make a huge difference in prisoner management.

Simplify the management of your correctional TV programming.

Here's what you can do:

FlexDM management enables staff to monitor and manage the entire system both locally and remotely.

- Alert staff & inmates with time-sensitive or critical information
- Live stream video from facility cameras
- Display educational courses & videos
- Create custom information channels
- Manage content remotely
- Play your DVD & VHS movies
- Restrict access
- Create music channels

The MX-400CC is designed for anyone looking to add channels to a new or existing in-house cable TV network. It can take a wide variety of IPTV inputs such as outdoor cameras, TV & Internet sources, streaming services as well as video from local storage or your PCs.

Facility Overview:
